REPORT OF THE METROPOLITAN DISTRICT COMMISSION.

To the Honorable the Senate and House of Representatives of the Commonwealth of Massachusetts in General Court assembled.

The Metropolitan District Commissioner has already presented to your Honorable Body an abstract of the account of the receipts, expenditures, disbursements and liabilities of the Water and Sewerage Divisions for the fiscal year ending on November 30, 1921, and now presents a detailed statement of the doings of the Commission in the Parks Division for the fiscal year ending on November 30, 1921, and in the Water and Sewerage Divisions for the calendar year ending December 31, 1921.

SECOND ANNUAL REPORT.

I. ORGANIZATION AND ADMINISTRATION.

COMMISSION, OFFICERS AND EMPLOYEES.

The term of office of Ellerton P. Whitney expired on November 30, 1920, and George B. Wason was appointed for the term of five years next succeeding. The Commission consists of James A. Bailey, Commissioner, Frank A. Bayrd, Frank G. Hall, William H. Squire and George B. Wason, Associate Commissioners. Frank G. Hall is Director of Parks, John R. Rablin, Director of Park Engineering; William E. Foss, Director of the Water Division; and Frederick D. Smith, Director of the Sewerage Division.

All directors of divisions serve without extra compensation, receiving only the salaries attached to the other positions which they hold. A two years' trial of this method of selecting directors proves it to be efficient and economical. The chief engineers are the persons best fitted to head their respective divisions, and the associate commissioner has supervised his division skillfully and effectively. It seems unnecessary and unwise to create new salaried positions under the name of directors of divisions.

George Lyman Rogers has continued as secretary, Alfred F. Bridgman as purchasing agent, and the following as chief engineers: of parks, John R. Rablin; of water, William E. Foss; of sewerage, Frederick D. Smith.

Mary V. Habberley has continued as bookkeeper and financial secretary of the Parks Division, and Alice G. Mason as bookkeeper and May L. Powers as financial secretary of the Water and Sewerage Divisions.

Herbert W. West has continued as superintendent of the Revere Beach Division and Charles River Division, Lower Basin; Elmer E. Bickford as superintendent of Nantasket Beach Division; Bartholomew J. Costello as superintendent of Blue Hills Division; John L. Gilman as superintendent of Charles River Upper Division; Albert N. Habberley as superintendent of Middlesex Fells Division.

The organization of the Water and Sewerage Divisions is stated in detail in the accompanying reports of the directors of those divisions.

The maximum number of employees during the year was 1,586, divided as follows: general offices, 33; parks, 995; water, 370; sewerage, 188.

In this tabulation of employees the police are included under parks, although considerable protection of the Water System is given by the metropolitan district police.

OFFICES.

During the year the principal office of the Commission was continued in the Kimball Building, and the water and sewerage engineering, bookkeeping and clerical work was carried on at Nos. 1 and 3 Ashburton Place. As the lease of the rooms in the Kimball Building expired on December 31, 1921, and the future rental would be about \$14,000 per year, the Commission determined to vacate these premises and consolidate all divisions under one roof at the Ashburton Place building, used for nearly a quarter century for metropolitan water and sewerage headquarters. This location is good, but the building is far from an ideal one for the purposes required, and it is again recommended that a suitable building be constructed to contain the administrative, engineering and clerical offices, and to safeguard the valuable plans and other property of the Commission.

II. GENERAL FINANCIAL STATEMENT.

Year ending November 30, 1921.

Expenditure for construction	\$413,072 16
Expenditure for maintenance	2,654,201 46
Total expenditure	3,067,273 62
Unexpended balance maintenance appropriations	305,084 63
Serial bonds paid	181,555 25
Increase in sinking funds	2,155,277 88
Decrease in net debt	2,336,833 13

On November 30, 1921.

Net debt	\$46,496,868 91
--------------------	-----------------

III. CONSTRUCTION.

In July the extension of the South Metropolitan Sewerage System to Wellesley, authorized by chapter 343 of the Acts of 1914, accepted by the town and begun in 1915, was completed and the town connected with the system. In December the Reading extension of the North Metropolitan Sewerage System, authorized by chapter 159 of the Acts of 1916 and begun in 1918, was also completed and the town connected. The cost of these extensions was very large, due in part to conditions growing out of the war and in part to natural difficulties of construction.

The principal work of construction in the Water System consisted of the completion of the southern extra high-service pipe line for Hyde Park and Milton, the installation of additional equipment at the Chestnut Hill pumping station, and the building of the foundation for the Arlington Reservoir.

In the Parks System the West Roxbury Parkway and the Dedham Parkway were completed, Cradock bridge in Medford was widened and improved, a sanitary building started at Riverside and the work of filling along Quincy Shore begun.

On the night of June 16 and the early morning of June 17, 1921, the wooden bridge over the Saugus River on the Lynnway Boulevard, under the control of the Metropolitan District Commission, was burned to the water's edge for a length of about 420 feet. A very important line of communication from Boston and its suburbs to Lynn, Swampscott, Salem and other portions of Essex County was thereby broken. No appropriation was available for the re-

construction of this bridge, and after a conference with the Governor it was voted to direct the chief engineer to prepare plans for a permanent bridge to cost not exceeding \$150,000, and subscriptions were obtained from leading banks and bankers of Boston to the amount of \$150,000 to pay the cost of constructing a permanent bridge, upon the understanding that the Governor would recommend to the Legislature of 1922 the repayment to the subscribers of the sums advanced by them.

Late in June a delegation from Essex County, headed by Mayor Creamer of Lynn and Henry S. Baldwin, chief engineer of the General Electric Company, met the Commission and urged the immediate construction of a temporary wooden bridge on account of the serious interference with travel caused by the destruction of a large portion of the old bridge. The fact that no funds of the Commonwealth were available for the work was called to the attention of this delegation, and Mayor Creamer promptly stated that he would undertake to obtain from the city council of Lynn an appropriation of the sum necessary to construct a temporary wooden bridge. It was understood that no contract could be made or promise given that the Commonwealth would reimburse the city of Lynn, but after a conference with the Governor, it was agreed that a recommendation would be made by him to the Legislature of 1922 that the city of Lynn be reimbursed for the sum expended for the construction of the temporary wooden bridge.

Rapid progress was made in the preparation of plans and the awarding of a contract for the furnishing of labor and equipment. The General Electric Company assisted in every way possible with its large and efficient organization, and work was started on the morning of July 5. Every effort was made by competent men to push the work as rapidly as possible and at moderate cost. At 11.15 A.M., July 18, the bridge was sufficiently completed to make it safe to allow traffic to pass over it, and the Commissioner, therefore, took over from Mayor Creamer of Lynn at that time the operation of the bridge, and it was opened to the public. A small amount of work remained to be done, and this was fully completed on July 28, 1921. Thus a bridge adequate for several years was constructed in record-breaking time, and the immediate need for a permanent fireproof bridge ceased.

On October 21, 1921, Mr. Henry S. Baldwin, chief engineer, submitted to the Commission a detailed statement of the rebuilding of the bridge, together with the figures of its actual cost. It appears from these figures that the cost of the work, including insurance against fire for a period of six months, was \$37,853.15.

IV. THE NOVEMBER STORM.

In the last days of November the Middlesex Fells Reservation, in common with a large region north and west of Boston, was visited by the most destructive storm of rain, sleet and snow recorded in the history of Massachusetts. For many hours the temperature remained at or near the freezing point, while a fairly constant precipitation of moisture in various forms added to the weight of accumulated ice on the branches and tops of trees and shrubs. During this period, as the wind arose there was an almost continuous cracking and breaking of limb after limb and tree after tree. When the sun finally melted the masses of ice and the surviving trees were released from their bondage, a scene of devastation, almost unparalleled, was revealed. Of thousands of trees only broken stumps remained, and of tens of thousands the tops or limbs had been stripped, so that the appearance of the woodland was not unlike some of the forests of France raked for weeks by the fire of cannon. All varieties of deciduous trees suffered total or partial destruction, but the pines and other coniferæ were damaged only slightly.

It is estimated that an expenditure of \$50,000 will be required to clear the ground in the Fells of broken branches and the stumps of ruined trees, and a larger sum will be needed to cut the broken tops and limbs and perform the necessary tree surgery. A generation will pass before the results of this disastrous storm will disappear from view.

In addition to the Fells, many acres of woodland under the control of the Commission in other localities suffered similar damage, but fortunately the Blue Hills Reservation escaped damage and destruction, as the temperature there was slightly higher than in most other parts of the Metropolitan District, and ice did not accumulate on the trees in sufficient quantity to break them down.

V. CHARLES RIVER BRIDGES.

Chapter 497, Acts of 1921, authorized and directed the Commission to remove four existing bridges over the Charles River, at Arsenal Street, Western Avenue, River Street and Cottage Farm, and to construct new bridges with suitable approaches at or near their respective sites at a cost not to exceed \$1,475,000.

After the act was passed it was discovered that it was defective in so far as it dealt with the three upper bridges, for the reason that it did not comply with an act of Congress approved February 27, 1911, which required the State, before the construction of said bridges or any of them is begun, to provide by legislative enactment for compensation for certain damages and for the appointment of commissioners by the Supreme Judicial Court to hear the parties in interest and assess damages.

Conferences with officials of the Commonwealth and of Boston and Cambridge resulted in a general agreement that it was best to submit the entire matter to the Legislature for further action before beginning the construction of any of the four bridges.

In order to have the benefit of the advice of a small committee made up of men of technical skill and artistic ability, to the end that the bridges may be a fitting expression of the best taste of the community, a request was made to the respective presidents of Harvard College, Massachusetts Institute of Technology, Boston Society of Civil Engineers and Boston Society of Architects, each to designate a man to serve on an advisory committee. This request was promptly honored and the following were named: Prof. George F. Swain, Prof. Charles M. Spofford, Mr. Leonard Metcalf and Mr. William D. Austin.

This committee made a careful study of the problem and reported in writing their conclusions, as follows:—

(A) That the Cottage Farm bridge "should not be rebuilt on its present site, but that the new bridge should be in the line between Magazine Street, Cambridge, and St. Paul Street on the Boston side."

"Our reasons for arriving at the above conclusion that the site should be changed are—

(1) We have had counts taken of the traffic over the present bridge, including observations as to the direction of this traffic before and after crossing the bridge, and we believe that the traffic would be better accommodated, and that the approaches would be better, if the bridge were on the suggested site.

(2) The suggested site would connect through thoroughfares on both sides of the river, and would afford a continuous thoroughfare between Central Square in Cambridge, and Brookline Village.

(3) Our studies and estimates have led us to the conclusion that a suitable bridge on the new site could be built within the appropriation, and that it would cost little, if any, more than if the new bridge were built on the present site. The cost of a temporary bridge would be saved, for the present bridge could be used as a temporary bridge during the construction of the new bridge; also, there would be less interference with railroad operation on the new site and less expense due to this cause.

(4) The character of the river bed, as shown by borings, indicates that it is practically the same as on the present site.

(5) The new bridge is to be a permanent one, and should be a worthy and handsome part of the park improvements. We believe that its appearance will be much better on the new site than on the present site, where it is disfigured by the proximity of the railroad bridge which adjoins and passes beneath it."

(B) That the Western Avenue bridge and the River Street bridge "are only about 1,000 feet apart, and the traffic over them is so small that a single bridge would suffice. We believe that there never was a time when it was as important as at present to practice economy, — personal, municipal or State. We are therefore unanimously of the opinion that only the Western Avenue bridge should be rebuilt, and that when the River Street bridge is no longer able to carry traffic safely it should be discontinued, and a traffic street built on the western side of the river between Cambridge Street and Western Avenue, over which traffic could be diverted. This street could be built on land now owned by your Commission. The saving of the interest on the cost of a new bridge at River Street would pay for the cost of this new street in a very few years."

As the conclusions of the advisory committee were adopted unanimously by the Commission and approved by officials of the cities chiefly interested, the Legislature will be asked at the session of 1922 to modify the former act in accordance with the recommendations of the advisory committee and the requirements of Federal law.

This report would be incomplete did it not record deep appreciation of the public spirit which actuated the members of this committee in making a painstaking investigation and giving valuable expert advice without reward other than the sense of a service to the Commonwealth well performed.

VI. RAINFALL AND CONSUMPTION OF WATER.

The rainfall on the watersheds of the metropolitan system and the yield therefrom for the year were about normal. Early in April all the reservoirs were full and water was wasted continuously until June. During the year no water was drawn for consumption from Framingham reservoirs Nos. 1 and 2, Ashland, Hopkinton and Whitehall reservoirs and Lake Cochituate, which together have a daily dry-weather capacity of about 40,000,000 gallons, a supply sufficient at 100 gallons per day per person for 400,000 people. At the end of the year the Wachusett Reservoir was 6.79 feet below high-water mark,—a normal point for that season.

The per capita consumption of water was reduced during the year to an average daily rate of 95 gallons. Principally on account of the gradual installation of meters, required by chapter 524 of the Acts of 1907, the total amount of water consumed in the District in recent years is not materially greater than in the years following the first filling of the Wachusett Reservoir in 1908.

The total amounts of water supplied to the Metropolitan Water District, in million gallons, for two years at the beginning and two years at the end of the fourteen-year period, are as follows:—

1908	45,911	1920	46,579
1909	43,478	1921	42,853

Thus a considerable increase in population has been offset for more than a decade by metering and otherwise; and it will be of interest to observe the effect in the future of the gradual metering of the services which are at present unmetered, and which number more than 40,000, or about 25 per cent of all services.

VII. THE SPOT POND CASE.

Chapter 488, Acts of 1895, which provided for a metropolitan water supply, authorized the taking *inter alia* of "Spot Pond, so called, in or near the town of Stoneham, and the lands under and surrounding the same, now owned by the cities of Malden and Medford and the town of Melrose, or either of them, held for the purpose of water supply or of protecting or preserving the purity of the water, and the pumping stations and pumps thereon." A taking of the said pond, lands, etc., was duly made by the Metropolitan

Water Board on January 1, 1898, and after costly litigation Malden, Medford and Melrose were awarded and paid a sum in excess of \$1,100,000. The rights of all parties to file petitions for the assessment of damages expired two years after the date of taking. Stoneham made no claim of ownership of Spot Pond or damages for the taking within this period.

Fourteen years after the taking, chapter 689, Acts of 1912, provided that Stoneham might file a petition for damages within one year, and a petition was duly filed. In 1921, twenty-three years after the taking, the petition was heard before three commissioners, who made various findings of fact and rulings of law, and concluded as follows: —

We, the commissioners, find that the petitioner suffered no damage; but in the alternative, however, that if, as a matter of law on the acts, votes, facts and findings hereinbefore set out, the petitioner on January 1, 1898, the date of the taking, had the right to take water for the use of its inhabitants from said Spot Pond, then we find for the petitioner and assess the damages at \$188,000, with interest from January 1, 1898.

The cost of the hearing to the Metropolitan Water District exceeded \$25,000, and if the Court does not accept the determination and the ultimate finding is in the alternative, the sum of \$188,000 with interest, or a total of more than \$400,000, will be required to be paid for Spot Pond in addition to more than \$1,100,000 paid for the same pond two decades ago.

VIII. FUNCTIONS OF METROPOLITAN DISTRICT COMMISSION.

The Metropolitan District Commission is a natural evolution from three separate metropolitan commissions of earlier years. When the Metropolitan Sewerage Commission was created in 1889 it seemed self-evident that the sewage disposal problem of Boston and the surrounding cities and towns could be handled better in one or two units than in eighteen units. Yet a strong contest against the constitutionality of the act was made in the courts, largely because of the novelty of the experiment of creating new units or districts. To-day no one doubts the wisdom of the experiment, and no one questions that the metropolitan sewers, pumping stations and outfalls have been built and operated wisely and economically.

The Metropolitan Parks Act of 1893 marks the next step in the development of the idea of a metropolitan Boston. The accomplishment of the Metropolitan Park Commission in obtaining and preserving the Blue Hills, Middlesex Fells, Revere Beach, Nantasket Beach, Charles River Basin and other important reservations, and in linking them together with adequate parkways and boulevards, is known of all men. In the important matters of a wise provision for outdoor recreation and the preservation of forest, shore and river front, Boston and its neighbors are in effect a single community.

The Metropolitan Water Act of 1895 carried still further the idea of a Boston metropolitan district, and the business enterprise of supplying water at cost to Boston and the near-by towns and cities has been an unqualified success. An abundant supply of pure water is obtained by all the inhabitants of the District, and in no case is the cost of the water to the consumer greater than in the old days of local individual sources of supply, and in many cases it is far less.

In 1901 the Metropolitan Sewerage System being largely completed, the Sewerage Commission and the Water Board were consolidated, and in 1919 there was a further consolidation of the Water and Sewerage Board and the Park Commission into the Metropolitan District Commission.

It seems probable that the growth and evolution of the Metropolitan District in a third of a century point to a greater growth and further evolution in the years to come. The common interest of all the people of the entire district in water supply, sewage disposal, reservations and boulevards is not unlike their common interest in policing, fire fighting, schooling and other public matters. Boston and its suburbs are already one in most respects. If the heart is impaired the remoter parts of the body suffer, and without the support of those remoter parts the heart will itself suffer. In the further gradual development of the metropolitan district idea may be found the best hope for the future of Boston and those cities and towns tributary to Boston and dependent for their welfare upon its prosperity.

It seems, therefore, that the metropolitan district conception ought not to be weakened or the functions of the board which is carrying on the work and the traditions of the earlier commissions lessened or impaired. The Metropolitan District is unlike a department of the State government. It is a local unit or group of cities

and towns lawfully banded together for the better administration of the important functions of creating one water supply from which each may obtain water, two sewage disposal systems jointly administered through which each may dispose of its sewage, and one system of reservations and parkways to be enjoyed by the inhabitants of all.

The cities and towns in the respective metropolitan districts are the real owners of the water, sewerage and park properties, and the Commonwealth, for convenience of administration and because it has lent its credit, holds the legal title and exercises certain supervision. The municipalities pay the bills in proportions fixed by law, and naturally desire to retain some measure of local self-government in relation to the important functions now entrusted to the District Commission. That State departments, with state-wide activities, made up in whole or in large part of non-residents of the Metropolitan District ought to administer the local affairs of Boston and its suburbs seems contrary alike to the dictates of common sense and experience.

IX. OTHER REPORTS.

The reports of the Directors of Parks, Park Engineering, Water and Sewerage, with the usual tables, statistics and financial statements, are herewith presented.

Respectfully submitted,

JAMES A. BAILEY,

Metropolitan District Commissioner.

Boston, February 26, 1922.

REPORT OF THE DIRECTOR OF PARKS.

HON. JAMES A. BAILEY, *Commissioner, Metropolitan District Commission.*

DEAR SIR: — I submit herewith my first annual report as Director of Parks of the Metropolitan District Commission.

Few people realize the extent and variety of the work involved in the maintenance of the Metropolitan Park System and the impossibility of noting, in the small compass of a report like this, all the interesting or important details of administration. The parks and boulevards are scattered through the thirty-eight cities and towns of Boston and vicinity, that is, through an area of over 400 square miles. The parks themselves have an aggregate area of 14 square miles. The parks and boulevards also include about 106 miles of carriage roads, 63 of which are much traveled automobile roads; 6 beaches, with a total water frontage of 13 miles; more than 53 miles of the river banks of the Charles, Mystic and Neponset; 4 large public bath-houses; the Charles River and Cradock bridge dams and locks; and the Boston and Cambridge embankments. This bare outline of the field of work readily suggests the multiplicity of details of maintenance and the impossibility of making more than a cursory review of the more important accomplishments of the year. Even this is not so simple a task as would appear on its face, because no feature of the administrative work of the Parks Division, however great, is worth recording merely because it has been done, but because it has made the park system more available to the public for exercise and recreation and has promoted public use and enjoyment. To accomplish this involves not only the supply, where needed, of pure drinking water, which is the sole problem of the Water Division, or the provision of sanitary accommodations, where needed, which is similar to the problem of the Sewerage Division, but the furnishing of these and all other reasonable facilities tending to increase public enjoyment and use of the natural beauties and advantages of the reservations. The problem of maintenance of the parks system is one of how best to promote and arouse interest in

healthy, outdoor enjoyment. It cannot be properly solved without an appeal to the human equation, — constant study and anticipation of the wants and desires of the public. I have confined the following report, therefore, to such features as seem to me may be fairly said to be conducive to this general purpose.

By chapter 509 of the Acts of 1920 the Cambridge park lands were transferred last December to the care of this Commission, and the name "Cambridge Parkway" was adopted for the lands thus transferred. Since then much has been done to improve the roads, walks, gutters, curbing and general appearance, and it is hoped in another twelve months to bring the parkway up to the same high standard as the rest of the parkways. The bath house at Magazine Beach did very well, becoming practically self-supporting for the first time in its history. On some days over 1,000 bathers took advantage of its accommodations. A sanitary is much needed there, and funds to build one have been asked for in the budget estimates.

During the spring the Charles River Speedway was resurfaced, and it is believed that the Speedway is not surpassed now by any in the country. A great many people attend the Saturday races there.

On the east bank of Charles River filling is going on, and it is hoped to have the road along the river from North Harvard Street to Cottage Farm opened for travel, with a view to completing at the earliest possible moment the driveway link connecting with Bay State Road, making another artery for travel to the west, and relieving congestion on Commonwealth Avenue.

A new sanitary building is now under construction at Riverside, near Weston bridge, which will be of great benefit to the public, and a much-needed improvement.

The Riverside Recreation Grounds have given their share of healthy outdoor entertainment to our people, both young and old, and it is the purpose of the Commission to have the road leading from the grounds to East Newton Street in better condition the coming spring.

In the vicinity of Echo bridge, the most picturesque bridge of the Parks District, some sort of a rest and sanitary building is sadly needed. The present accommodations are most primitive. I recommend the construction of such a suitable rest and sanitary building at that place.

The work of filling along Quincy Shore Drive, from Appleton Street to Fenno Street, is being started for the protection of the roadway and with the idea of widening this much-used road which now is too narrow to accommodate the many people who visit the reservation in automobiles on summer evenings.

West Roxbury Parkway and the new bridge over the New York, New Haven & Hartford Railroad, from Belgrade Avenue to Centre Street, have been completed, and are much used by automobilists in going to the south of Boston. The automobilists are using Blue Hills Reservation more than ever, and with Furnace Brook Parkway now in fine shape to Adams Street, West Roxbury Parkway completed and Dedham Parkway opened to travel, the public is provided with a much-needed drive from the towns south of Boston to the South Shore. I recommend that still another outlet for automobiles be made toward Braintree from Houghton's Pond along the southerly border of the reservation.

Bids for the construction of Neponset bridge have been advertised for from time to time, but thus far the bids have been in excess of the appropriation available for the purpose. I hope the Legislature will provide enough additional appropriation to enable the construction of a proper permanent structure. A bill requesting an additional appropriation will be presented to the Legislature of 1922.

The need of a suitable connection between Boston and the Metropolitan Park System on the north has been obvious, and investigations and favorable reports have been made by various commissions and organizations in the last twenty years. This necessity grows more imperative every year. Such a highway might well be constructed for both general and pleasure traffic, and it seems to me that, so far as the cost would be incurred in providing for general traffic purposes, a part might well be paid from money received by the Commonwealth for motor vehicle registration and license fees, and also that an allotment might be made from the Federal aid to roads in this Commonwealth.

Middlesex Fells Division is receiving larger patronage. The Commission has improved the facilities for parking at the Stoneham headquarters, where many hundreds visit the collection of animals and birds. I believe this collection should be enlarged and improved when possible. At the northerly end of Spot Pond a large lot of land has been set aside for automobile parking, and is being taken

advantage of. I think there should be a road opened to automobile travel from Spot Pond or Forest Street, connecting with Mystic Valley Parkway in Winchester. This would give a large number of people easy access to the reservation who now have to travel around Bear Hill or to the south on Border Road, which has been opened to automobile traffic with success.

Chapter 398 of the Acts of 1921 required the Commission to reconstruct, widen and improve Cradock bridge over the Mystic River in Medford. The work is practically completed.

The gypsy-moth situation is well in hand, and the elms and other hardwood trees are doing better. The planting of trees, which has been practically at a standstill for the last few years, except for 200,000 white pine seedlings which have been planted in Blue Hills Reservation, is starting again, and I am greatly in favor of doing much of it. The cutting of the dying chestnut trees in Blue Hills Reservation is almost completed, and the white pines, which now are well started, will soon improve the appearance of the reservation. I think, however, that the question of varying somewhat the kinds of trees planted might well be given serious study. I would recommend also that, in order to provide food for the wild animals and birds in the reservations, more planting be done of berry-bearing shrubs and nut-bearing trees.

During the summer, permission was granted to the Appalachian Mountain Club to use land near Ponkapoag Pond for the erection of a camp, which I consider a wise idea. The club does, and has done, much to stimulate love of outdoor life, which is so essential to the physical and mental well-being of the people, and to secure which the Park System was created. In this connection it seems most appropriate to recall the fact that to the Appalachian Mountain Club is due the credit of starting the movement which ultimately ripened into the Metropolitan Park System. In 1890 the club called a meeting of persons interested in the "preservation of scenery and historical sites in Massachusetts." The invitation to the meeting called attention to the fact that opportunities for beholding the beauty of nature are of great importance to the health and happiness of crowded populations; that these opportunities were rapidly vanishing in Massachusetts; that many remarkable scenes near Boston had been despoiled of their beauty; that this was likely to happen throughout the State; and that, unless some steps toward

preservation of those natural advantages were taken quickly, the opportunity for action was past. The meeting thus called resulted in the appointment of a committee to draft a petition to the Legislature for legislation which finally became the act of 1891 incorporating the Trustees of Public Reservations. Almost immediately the Trustees of Public Reservations took up with the Park Commissioners and committees of the Metropolitan District about Boston the subject of legislation to preserve the scenes of natural beauty and of public interest in and around Boston, and as a result a petition was drafted to the Legislature asking for prompt action in this direction. This petition resulted in the creation, in 1892, of a commission to study the question, and in 1893 the creation of the Metropolitan Park Commission to lay out, acquire and maintain ample open spaces for the use of the public in the towns and cities in the vicinity of Boston.

Upon petition of Representative William D. Lancaster, a ball field was laid out in Dorchester Lower Mills, Neponset River Reservation, which has been enjoyed by several thousands of people.

Charles River Basin and the beautiful walks of the Boston embankment have been used more than ever before. Throngs of people enjoy trips in the numerous boats licensed by the Commission to take on and land passengers at the floats on the basin.

The band concerts during the summer attracted large numbers, and many compliments in regard to the fine quality of the music have been received. The concerts are especially appreciated at Nantasket. The hotel and other privileges there were well patronized. A garage and building for storage of wagons and tools is being erected on the westerly side of Nantasket Avenue, northerly from the police station. Some form of shelter for people caught in the rain and waiting for transportation, and a men's sanitary are greatly needed at the junction of Nantasket Avenue and Wharf Avenue, so called, and I recommend that such be provided as soon as possible.

Alterations and repairs have been made in the fence surrounding the Bunker Hill Monument grounds, which have now been put in a condition appropriate to furnish a setting for the most historic and significant monument in America. Over 35,000 people visited and ascended the monument during the year. Such an appropriation

should be made each year for the care of this monument and the grounds as will make it possible to eliminate any signs of neglect.

The bath-houses at Revere, Nantasket and Nahant beaches are deteriorating every year. They are open structures of wood and should be rebuilt of more lasting material as soon as possible.

By chapter 397 of the Acts of 1921 the sum of \$225,000 was appropriated for completing the extension of Winthrop Parkway to the Winthrop line. Bids were obtained this fall for this construction along the shore, but the bids proved too high to allow both construction and purchase of the necessary additional land. I recommend that an additional appropriation be asked for sufficient to complete this parkway along the shore route, which seems to be the only feasible one for straight parkway purposes under the parkway act.

Many expressions of satisfaction have been received from time to time in regard to the change in color of paint for fences, vehicles, etc., from dark brown to the gray used in other State departments. This is a great saving because the mixing is done by the reservation forces, and the paint is bought in large quantities. The high board fences, formerly painted dark brown, are being done away with, and cement posts with solid gray planks are being substituted where needed. This is an improvement in appearance and cost.

We are now policing Chestnut Hill Reservoir with metropolitan district police successfully, but the city of Boston, which controls the surrounding roads, does not keep them up to the standard of the park roads, and consequently the roads are not used as they should be.

Our police department is doing excellent work, and the officers and men are to be congratulated on the way in which they have handled their many difficult problems. The Department is now nineteen men less than last year, made possible partly by the greater use of motorcycles and automobiles, which enables the officers to cover much greater territory than when on foot or on horseback. The police department has more work than at any other time, with the additional work made necessary by the taking over of the Cambridge Parkway lands, policing Chestnut Hill Reservoirs, the yearly increasing traffic, and the greatly increased trouble caused by intoxicated persons in automobiles since the prohibition amendment went into effect. It is the desire of the Commission to still further

reduce the number of officers on horseback and increase the number on motorcycles. At Revere, Charles River Division, Lower Basin, and the Speedway the police horses have been done away with, and it is hoped to dispense with most of them in Blue Hills and Middlesex Fells. It has been found that one motorcycle officer is equal to two on horseback, and much more economical.

The attendance at the bath-houses has been excellent, and the conduct of the bathers has been much improved by the valuable co-operation of the two experienced policewomen with the rest of the force.

The lighting of most of the park roads is very poor, owing to the difficulty of obtaining electricity for the purpose. A special report of the subject was made to the Legislature of 1921, and estimates furnished for installation of electric lighting. It is hoped that this work, or a beginning on it, will be authorized by the next Legislature.

In order that the public may keep in mind the facilities for outdoor exercise and enjoyment offered by the Parks System, and of such improvements as are made from time to time, I would recommend that some method be devised of conveying to the press items of information on this subject and news of new improvements and developments. I think this is perfectly feasible without any additional expense.

Respectfully submitted,

FRANK G. HALL,

Director of Parks.

DECEMBER 1, 1921.

Metropolitan Park System—Dec. 1, 1921.

[illegible]

REPORT OF THE DIRECTOR OF PARK ENGINEERING.

HON. JAMES A. BAILEY, *Commissioner, Metropolitan District Commission.*

SIR: — I respectfully submit the following report of the work done under the supervision and direction of the engineering department of the Park Division for the year ending November 30, 1921.

The organization of the engineering department has been maintained substantially the same as in the past four or five years, with about the same minimum number (15) and slightly less maximum number (19) of employees. Engineering services have been furnished for all construction and maintenance work of the Park Division, including preliminary surveys, studies, designs and estimates, construction plans and specifications, and supervision and inspection; investigation and reports on all requests for permits by cities, towns, corporations, etc., for work in the reservations and parkways, the issue of permits when authorized and the supervision of the work done thereunder; the care, repair and operation of bridges, locks, tide gates and sluice gates.

The cost of conducting the department has been as follows: —

Engineering:		
Construction:		
Services		\$10,554 10
Expenses		2,757 57
		\$13,311 67
Maintenance:		
Services		\$24,265 47
Expenses		2,315 13
		26,580 60
Total		\$39,892 27

The following is a detailed list of the work done under the direction of the engineering department.

PARKWAYS.

Blue Hills Parkway.

The section of the westerly roadway of Blue Hills Parkway from Mattapan bridge to Eliot Street has been resurfaced with bituminous concrete pavement. The work was done by the Rowe Contracting Company, lowest bidder. Work was begun on June 9, 1921, and completed on June 30, 1921. The total cost was \$7,242.71. Area resurfaced, 3,274 square yards.

A section of the westerly or heavy traffic roadway of Blue Hills Parkway, near Canton Avenue, has been resurfaced with bituminous concrete pavement. The work was done by Mace Moulton, Jr., was begun July 25, 1921, and completed on August 5, 1921. The total cost was \$5,979.51. Area resurfaced, 3,228 square yards.

Dedham Parkway.

The work of grading and surfacing Dedham Parkway from Stony Brook Reservation to East Dedham has been completed. The work has been done by the forces of the Blue Hills Division under Superintendent Costello. The parkway was opened to public travel on September 10, 1921.

Furnace Brook Parkway.

Work has been done and is now in progress by the forces of the division in cleaning, widening and deepening the channel of Furnace Brook, where it passes over land under care and control of this Commission. This work is being done in conjunction with similar work by the city of Quincy for the purpose of preventing the flooding of the lowlands bordering the brook, during times of heavy rainfall. The city is also rebuilding Newport Avenue culvert, which has been one of the chief obstructions to the free flow of the brook.

Lynnway.

On June 17, 1921, the northerly half of Saugus River bridge, from the drawbridge to a point about 200 feet from Lynn abutment, was burned. The plans and specifications were prepared for reconstruction of the burned portion in a permanent form, with stone masonry piers and steel and concrete superstructure. The

plans were completed on June 25, 1921, and bids received on June 30, 1921. The lowest bid was that of the Aberthaw Construction Company for \$133,027. On June 30, 1921, at their request, a hearing was given by the Commission to representatives of Essex County and the city of Lynn, at which hearing the representatives of the city of Lynn and the General Electric Company offered to furnish funds and their services to rebuild the burned portion of the bridge immediately, with temporary wooden construction. Their offer was accepted by the Commission, and the work was begun on July 5, 1921, by W. S. Rendle, Contractor, and was prosecuted day and night until July 18, 1921, when it had reached a point where it was safe to open to public traffic. The whole work was completed on July 28, 1921. The cost of the work, as reported by the representatives of the General Electric Company, has been \$37,853.15.

Middlesex Fells Parkway.

At the request of abutting owners, in the section of the westerly side of the parkway between Myrtle Street and Amaranth Street, granolithic walks have been laid. The work was done in August by Alexander Palladino, lowest bidder, at a total cost of \$421.16. One-half the cost was paid by the abutting owners.

A section of the east roadway between Medford Street and Adams Street, a distance of 1,400 feet, has been resurfaced with bituminous macadam. The work has been done by the forces of the Middlesex Fells Division under Superintendent Habberley. About 5,600 square yards have been built at a total cost of \$8,051.40.

Mystic Valley Parkway.

A section of Mystic Valley Parkway, from a point opposite the dam, between the lower and upper lakes, to the end of the work built last year, a distance of about 1,780 feet, has been resurfaced with bituminous macadam. The work has been done by the forces of the division at a total cost of \$10,003.80.

Old Colony Parkway.

On January 19, 1921, bids were again received for the construction of a permanent Neponset bridge. As before, alternative bids were asked for two designs, one for the arch type and one for the rein-

forced concrete girder type. The lowest bid for the arch type was that of George M. Bryne, \$795,779.50. The lowest bid for the girder type was that of the Bay State Dredging and Contracting Company, \$662,136.50. Both bids were considerably in excess of the funds available for the construction of the bridge and all bids were rejected and the work indefinitely postponed.

Conditions and prices appearing to be more favorable, bids were again asked on October 27, 1921. At this time bids were asked for the same types of bridge as in January, with the addition of a steel plate girder type. The lowest bids were as follows:— arch type, Coleman Brothers, \$653,133.50; concrete girder type, Bay State Dredging and Contracting Company, \$463,645; steel girder type, Bay State Dredging and Contracting Company, \$445,300. Although considerable reduction is shown between the bids of January and October, the funds available were not sufficient to proceed with the work; therefore all bids were again rejected.

Under contract with the Boston Development and Sanitary Company, 9,623 cubic yards of ashes have been deposited on the parkway for filling near the approach to Columbia Road north of Mount Vernon Street. The total cost has been \$2,155.64.

Revere Beach Parkway.

A concrete retaining wall has been built on the northerly line of the parkway along Spalding Street to prevent the long slope of the approach to the railroad bridge from encroaching on Spalding Street. Work was done by Alexander Palladino, lowest bidder, at a total cost of \$1,592.64. Work was begun on August 5, 1921, and was completed on October 31, 1921.

A section of Revere Beach Parkway, from Mill Street to Railroad Avenue, has been resurfaced with bituminous macadam by the forces of the Revere Beach Division. About 2,880 square yards have been laid at a total cost of \$4,312.29.

West Roxbury Parkway.

On March 17, 1921, bids were received for the construction of the parkway from Belgrade Avenue to Centre Street, including the bridge over the New York, New Haven & Hartford Railroad. The contract was awarded to the lowest bidder, Coleman Brothers, Inc.

The work was begun on March 24, 1921, and was completed on August 13, 1921, at a total cost of \$54,971.28. With the completion of this section, which was opened to public travel on August 22, 1921, an excellent route is now provided from Stony Brook Reservation and Washington Street via Centre Street, which has recently been reconstructed by the city of Boston, to Jamaica Way.

Land has been transferred by this Commission to the care and control of the Public Works Department of the Commonwealth for the widening of Washington Street, from LaGrange Street to the West Roxbury Parkway, and the work of widening is now in progress.

Granolithic walks have been constructed over the section from Anawam Avenue to Centre Street to conform to those constructed by the city of Boston in the improvement of intersecting streets. Work was done by Alexander Palladino. The work was begun on August 20, 1921, and completed on August 29, 1921, at a total cost of \$914.72.

Winthrop Parkway.

Plans and specifications for construction of sea wall and section of the parkway, from Ocean Avenue, Revere, to Sewall Avenue, Winthrop, have been prepared. Bids were received on October 13, 1921, the lowest bid being that of A. G. Tomasello, \$265,147.50. As the funds available were not sufficient to do the work called for in these proposals all bids were rejected and the work postponed.

RESERVATIONS.

Blue Hills Reservation.

Surveys, plans and estimates for roadway from Administration Road to the summit of Chickatawbut Hill have been completed.

Bunker Hill Reservation.

Plans and specifications have been prepared for building additional iron fences and repairing existing fences. Bids were received on April 28, 1921, and contract awarded to the lowest bidder, the W. A. Snow Iron Works. Work was begun on May 9, 1921, and completed on July 8, 1921. Total cost, \$4,201.39.

Charles River Reservation, Upper Division.

Work of widening Nonantum Road at its junction with Maple Street, Newton, to conform to Maple Street as recently widened by the city of Newton, has been completed. Bids were received on April 21, 1921, and contract awarded to lowest bidder, Alexander Palladino. Work was begun on May 2, 1921, and completed on May 28, 1921, at a cost of \$1,870.51.

Section of Charles River Road southerly from Arsenal Street, a distance of about 1,400 feet, has been graded and resurfaced with bituminous macadam by the forces of the division under Superintendent Gilman. About 6,223 square yards were laid at a total cost of \$5,140.32.

Plans and specifications have been prepared by Desmond & Lord, architects, for combined sanitary and garage near Riverside headquarters station. Bids were received on October 31, 1921, and contract awarded to lowest bidder, Archdeacon & Sullivan. Work was begun on November 15, 1921, and is now in progress.

Charles River Reservation, Lower Basin.

The act authorizing the construction of Charles River Basin provides that the channels and canals shall be maintained at the specified depths. In some portions of Broad and Lechmere canals shoaling has occurred during the past five years, requiring dredging of about 13,572 cubic yards of material. Bids were received on May 12, 1921, and contract awarded to W. S. Rendle, lowest bidder. Work was begun on June 9, 1921, and was completed on July 25, 1921, at a total cost of \$6,759.61.

Wooden pile dolphins at the approaches to Lechmere Canal and the ship lock have been rebuilt and repaired. Bids were received on June 2, 1921, and contract awarded to the lowest bidder, Rendle-Stoddard Company. Work was begun on July 11, 1921, and was completed on August 5, 1921, at a total cost of \$2,885.11.

Preliminary surveys, studies and estimates have been in progress for rebuilding Cottage Farm bridge over the Charles River.

Cambridge Parkway.

The iron fences on the river walls have been repaired by replacing considerable of the top rail which had become dangerously weak on account of corrosion, and replacing several posts and other parts of the fences which were broken. This work was done by the Progressive Iron Works, lowest bidder. Work was begun on June 20, 1921, and was completed on August 11, 1921, at a total cost of \$1,738.48.

All the iron fences along the river walls of the parkway have been painted with two coats of paint. The work was done by Maurice M. Devine, lowest bidder. Work was begun on July 20, 1921, and was completed on August 11, 1921, at a total cost of \$1,892.13.

The work of repairing the roadways of the Cambridge Parkway, as far as the funds available would permit, has been done by the forces of the division under Superintendent West. The work has principally consisted of surfacing with bituminous macadam strips on each side of the travel way along the gutters, varying in width from 3 to 10 feet, the setting of edgestone, trimming and grading planting spaces and walks. The work necessary to put the roads in good condition is about one-half completed, and should be continued during the coming year.

Lynn Shore Reservation.

Extensive repairs have been made to the concrete sea wall in the vicinity of Red Rock section. The repairs generally were made by the use of the cement gun. The work has been done by the forces of the Division at a total cost of \$7,197.85.

Middlesex Fells Reservation.

The section of Woodland Road from Pond Street to the southerly end of the New England Sanitarium, a distance of 2,800 feet, has been resurfaced with bituminous macadam by the forces of the division. About 6,800 square yards have been resurfaced at a cost of \$8,529.41.

Plans and specifications have been prepared for construction of concrete garage and storage shed of five stalls at the Pond Street headquarters service yard. Bids were received on October 27, 1921,

and contract awarded to S. L. Milton, lowest bidder. Work was begun on November 2, 1921, and is now in progress.

Plans and specifications for a three-car garage at the police station, Forest Street, Medford, have been prepared by Desmond & Lord, architects. Bids were received on October 31, 1921, and contract awarded to Archdeacon & Sullivan, lowest bidder. Work was begun on November 9, 1921, and is now in progress.

Mystic River Reservation.

Plans and specifications have been prepared for the widening of Cradock bridge, Main Street, Medford, as provided for by chapter 398, Acts of 1921. Bids were received on September 1, 1921, and contract awarded to lowest bidder, Simpson Brothers Corporation. Work was begun on September 8, 1921, and completed on November 30, 1921.

Nantasket Beach Reservation.

Plans have been prepared for a four-car garage and storage sheds at the northerly end of the reservation. The foundations for the building have been constructed during November by the forces of the division. It is expected to complete the plans and build the superstructure next spring.

The parking space for automobiles south of the bath-house has been enlarged by covering the remaining area of sand with a layer of clay. A portion of this parking space was treated in this manner in the fall of 1920 and results were very satisfactory. Space is now provided for the parking of about 1,000 automobiles on this one area alone.

Quincy Shore Reservation.

Bids were received on November 10, 1921, for furnishing filling material for repairs to the shore slopes and to provide for future possible widening of the roadway. Contract was awarded to Gerrish Dredging Company, lowest bidder, and the work will probably begin about December 1, 1921. It is proposed to obtain the material from Quincy Bay and place it in the slopes with hydraulic dredge.

Winthrop Shore Reservation.

Repairs have been made to a section of the sea wall near Sturgis Street. At this point a bastion projected over the general line of the wall and was particularly subject to damage by severe storms.

It was considerably wrecked during the storm of last November, and in the repairs the bastion was removed and the wall built back on the line of the main wall. Bids were received on April 7, 1921, and contract awarded to lowest bidder, Harvey L. Maney. Work was begun on April 14, 1921, and was completed on June 24, 1921, at a total cost of \$9,705.26.

DRAWBRIDGES AND LOCKS.

All work of maintenance and operation of drawbridges, locks, sluices and tide gates has been under the direction and supervision of this department. General repairs have been made to all bridges under the care and control of the Commission, the work being supervised by this department. The work of breaking ice in the channels and canals in the Charles River Basin, which was done by the boat owned by the Commission, was not as difficult as in the winter of 1919–20, but the services of the boat were required continually from about December 15, 1920, to March 15, 1921. The cost of this work, including the operation, maintenance and repairs of the boat, was \$6,149.23.

The large gates in the ship lock were painted in April of this year. The work of cleaning and painting was done by the forces employed at the dam, with the assistance of painters furnished under contract with Maurice M. Devine. During the progress of the work it was necessary to close the lock from the passage of vessels for two periods, from April 4, 1921, to April 14, 1921, and from April 20, 1921, to April 30, 1921.

The floor system of the drawbridge at Charles River Dam was entirely renewed. Work was done by the forces employed at the dam, with the assistance of bridge carpenters furnished by Rendle-Stoddard Company. Work was begun on June 27, 1921, and was completed on August 18, 1921.

The floor system of the drawbridge of Wellington bridge has been rebuilt during the month of November. The work has been done by the forces employed on the bridges, with the assistance of bridge carpenters furnished by Rendle-Stoddard Company.

The following is a record of the traffic through locks and drawbridges during the year: —

CHARLES RIVER DAM AND LOCKS.

Main Lock.

Number of openings	3,531
Number of vessels	2,912
Number of boats	3,257
Lumber (feet B. M.)	2,361,265
Coal (tons)	260,475
Oil (barrels)	299,000
Sand (tons)	102,453
Gravel (tons)	42,605
Empty barrels	4,437
Rubble stone (tons)	5,700
Granite (tons)	2,577
Piling (pieces)	522
Water (gallons)	3,000
Tallow (drums)	2,200
Miscellaneous (tons)	1,250

There were 1,841 drawbridge openings.

The small boat lock was not operated this year.

WELLINGTON BRIDGE.

Number of openings	144
Number of vessels	186

MALDEN RIVER BRIDGE.

Number of openings	712
Number of vessels	1,298

SAUGUS RIVER BRIDGE.

GENERAL.

The work of road repairs and maintenance, which has consisted generally of surface treatments and patching with bituminous materials, has been done by the forces of the various divisions under the supervision and direction of the engineering department. Work of resurfacing portions of the parkway and reservation roads, where most necessary, has been carried on by the forces of each division to such extent as the funds available would permit. In the last ten years considerable progress has been made in this work of reconstruction and resurfacing of the park roads, to meet the requirements of motor car traffic, at an expenditure of from \$30,000 to \$40,000 each year. To complete the necessary work of reconstructing, widening and resurfacing the estimated cost is about \$600,000. It is desirable that this work be done as soon as possible, but, if it seems inexpedient to expend this amount at once, it may be spread over a period of years, as in the past. If the latter course is adopted, sufficient sums for the maintenance of the existing surfaces should be provided.

All bridges under the care and control of the Commission have been inspected twice during the year and reports made with recommendations and estimates of cost for repairs.

The following tables are appended to this report: Table 1, data relating to Metropolitan Park System, and Table 2, summary of cost of road repairs and maintenance.

Respectfully submitted,

JOHN R. RABLIN,

Director of Park Engineering.

DECEMBER 1, 1921.

REPORT OF THE DIRECTOR AND CHIEF ENGINEER OF WATER DIVISION.

JAMES A. BAILEY, *Commissioner, Metropolitan District Commission.*

SIR: — I have the honor to submit the following report of the construction and maintenance operations of the Water Division for the calendar year 1921.

ORGANIZATION.

The principal assistants employed in directing and supervising the work of the Division at the close of last year have continued in service for another year, and are as follows: —

John L. Howard . . .	Deputy Chief Engineer.
Elliot R. B. Allardice . . .	Superintendent of Wachusett Section.
Frank S. Hart . . .	Superintendent of Sudbury Section.
Samuel E. Killam . . .	Superintendent of Distribution Section.
Arthur E. O'Neil . . .	Superintendent of Pumping Stations.
Alfred O. Doane . . .	Engineer in charge of Mechanical Engineering and Inspection.
William W. Locke . . .	Sanitary Inspector of Watersheds.
Clifford Foss . . .	Engineer in charge of Distribution Civil Engineering.
Benjamin F. Hancox . . .	Head Draftsman.
James W. Killam . . .	Assistant Engineer in charge of Coal and Oil Laboratory.
William E. Whittaker . . .	Chief Clerk in charge of General Office.
Charles E. Livermore . . .	Biologist in charge of Biological Laboratory.

Including these principal assistants the number of supervising, engineering and clerical employees was 45 at the beginning of the year and 43 at the end of the year.

In addition to these forces the labor forces engaged in maintaining and operating the reservoirs, aqueducts, pipe lines, hydro-electric stations and pumping stations, and doing miscellaneous construction work, have been as follows: —

SECTION.	NUMBER OF EMPLOYEES.			
	Beginning of Year.	End of Year.	Maximum.	Average.
Wachusett section	48	48	83	65
Sudbury section	74	72	74	72
Distribution section	102	106	109	100
Pumping stations	74	73	76	74
Total labor forces	298	299	342	311

CONSTRUCTION.

METERS AND CONNECTIONS.

In connection with the work of relocating the meters and connections on the pipe lines acquired from the city of Boston in 1913, the pavement in Washington Street, Brookline, was permanently repaired where disturbed by installing Venturi meters and valves near Brookline Avenue in 1919. The work was done by James Driscoll & Son, under contract No. 8, in May and June, and included 539 square yards of brick pavement on a concrete base. The total expenditures in connection with the work amount to \$3,589.35.

All of the work contemplated on meters and connections under the provisions of chapter 172 of the General Acts of 1916 is now completed, with the exception of moving the Venturi meter in the 48-inch southern high-service main from Boylston Street, at Fisher Avenue, in Brookline, to the Boston-Brookline boundary line at Washington Street.

SOUTHERN EXTRA HIGH-SERVICE PIPE LINE FOR HYDE PARK AND MILTON.

The additional southern extra high-service pipe line for Hyde Park and Milton, authorized by chapter 172 of the General Acts of 1916, was completed with the laying of the 12-inch pipe line under the Neponset River and the New York, New Haven & Hartford Railroad, between West Street and Vose Avenue, Hyde Park.

The pipes and special castings for the work were furnished by the Division and were laid by the George T. Rendle Company, under contract No. 11. The work was begun September 19 and was completed December 1 and the line was put into regular service December 31. This section of pipe line includes 217 feet of 12-inch

pipes with flexible joints and 143 feet of 12-inch pipes with ordinary joints. The cost of the pipes and special castings is \$2,753.24; of laying the pipes, \$5,752.81; of engineering and additional work, \$869.44; making the total cost \$9,375.49.

PUMPING EQUIPMENT, SOUTHERN HIGH SERVICE.

The work of installing additional equipment at the Chestnut Hill pumping stations, under the provisions of chapter 530 of the Acts of 1920, is well advanced.

The Snow cross-compound pumping engine, No. 16, built by the Worthington Pump and Machinery Corporation, has a rated pumping capacity of 15,000,000 gallons a day against a head of 190 feet. The steam cylinders are 23 inches and 54 inches in diameter; the double-acting pump plungers are $23\frac{3}{4}$ inches in diameter; the stroke is 36 inches, and when pumping at full capacity the engine operates at a speed of 38.4 revolutions a minute.

The two new vertical fire-tube boilers, Nos. 20 and 21, built by the D. M. Dillon Steam Boiler Works, are each 98 inches in diameter, 24 feet in height and contain 400 tubes 2 inches in diameter, and are fitted with Perfection shaking grates.

In connection with this installation a 35-kilowatt electric lighting unit, purchased in 1920 from the Ames Iron Works, was set up in station No. 2 by the regular pumping service force; the three old horizontal boilers, Nos. 1, 2 and 3 at station No. 1 were sold with settings to Thomas Rush, and removed to provide space for the new boilers which were delivered at the station on cars about the first of June, and were unloaded and set on foundations by Frazer Pritchard, who also removed the old engine, No. 2, to provide space for the new engine.

The old foundations were rebuilt for the new boilers and engine by the regular distribution section force, which also laid the new 36-inch suction and 30-inch discharge pipe and installed the track hopper for the new coal conveyor.

The galleries for the boilers were made and erected by the Norfolk Iron Company, and the regular pumping service force erected the flue, connected up the feed water and steam piping, and equipped the boilers with gages, water columns and other accessories.

To provide space for the new engine foundation the machine shop in the basement of station No. 1, back of engine No. 2 founda-

tion, was relocated in the southerly portion of the stable which, on account of changes during recent years, is no longer required for horses, and the new location of the shop midway between the pumping stations is more convenient than the old location.

An Underwood coal conveyor has been purchased for station No. 1 to replace the existing obsolete hoist which is in poor condition. The new concrete track hopper and elevator pit have been installed and the erection of the conveyor is in progress.

Of the \$200,000 appropriated for the additional machinery and appurtenances \$101,675.90 has been expended, obligations under existing contracts amount to \$40,201.59 and some minor expenditures will be necessary to complete all of the work contemplated.

ARLINGTON RESERVOIR.

Replacement of the existing standpipe on Arlington Heights with a large steel tank enclosed in a masonry tower was authorized by chapter 530 of the Acts of 1920 and the sum of \$175,000 was appropriated for the purpose.

Studies and plans for this work having been prepared, the additional land needed for the reservoir was acquired from the town of Arlington by taking dated October 13, 1920, and on October 10, 1921, a contract was made with Harvey L. Maney for constructing the concrete foundation. The contract included the excavation of about 1,400 cubic yards of earth, 100 cubic yards of rock and the placing of about 1,000 cubic yards of concrete, and the work was completed December 24. The total value of the work done under the contract is \$10,557.

On December 29 a contract was awarded to Walsh's Holyoke Steam Boiler Works for removing the existing tank and erecting a new steel tank 75 feet in diameter and 61.25 feet in height, on the same site, for the sum of \$29,737.

NORTHERN HIGH-SERVICE PIPE LINES.

Plans have been completed for the additional pipe lines authorized for reinforcing the existing northern high-service mains in Everett, Malden, Medford and Somerville. In connection with this work a permit, dated December 28, 1921, has been obtained from the War Department authorizing the laying of a 20-inch water pipe across the Mystic River in Medford, about 1 mile upstream from Well-

ington bridge, at a depth of not less than 10 feet below mean low water, in accordance with our plan.

The purchase of the necessary pipes and special castings for these pipe lines within a few weeks is contemplated so that pipe laying can be begun early in the spring.

PUMPING EQUIPMENT, NORTHERN HIGH SERVICE.

On account of continued high prices, the work of installing additional equipment at the Spot Pond pumping station has been deferred but further studies have been made of the special requirements at this station to determine the best equipment for the service.

WESTON AQUEDUCT SUPPLY MAIN.

Surveys have been made of the southern portion of the proposed supply main from the Weston Aqueduct to the northern low-service district, at times when the engineers were available for this work.

MAINTENANCE.

PRECIPITATION AND YIELD OF WATERSHEDS.

The annual precipitation and yield from the watersheds was about normal, considerable excess precipitation in April, July and November making up the deficiency in several other months.

Between June 15 and December 15 the city of Worcester discharged 224,800,000 gallons of water into the Wachusett Reservoir watershed from the area formerly tributary to the reservoir which was diverted in 1911. By agreement with the city a payment of \$2 a million gallons is made for the water, but no payment is made for 1,818,200,000 gallons of water which was received at other times during the year, as the Wachusett Reservoir filled before June 15.

STORAGE RESERVOIRS.

The capacities of the storage reservoirs of the Metropolitan Water Works, the elevation of the water surfaces, and the quantity of water stored in each reservoir at the beginning and at the end of the year are shown by the following table: —

STORAGE RESERVOIRS.	Eleva- tion ¹ of High Water.	Capacity (Gallons).	JAN. 1, 1921.		JAN. 1, 1922.	
			Eleva- tion ¹ of Water Surface.	Amount stored (Gallons).	Eleva- tion ¹ of Water Surface.	Amount stored (Gallons).

¹ Elevation in feet above Boston City Base.³ Below Circular Dam.² Excluding Dudley Pond which was abandoned April 3, 1916.⁴ To top of flashboards.

The diagram on page 44 shows the quantity of water stored in the Wachusett Reservoir, and the quantity stored in all the storage reservoirs combined during the year.

The table and diagram show the total storage which could be drained from the reservoirs. Special provisions would be necessary, however, to draw about 10,000,000,000 gallons of this storage for consumption, as it is below the outlet channels which can be conveniently used for regular service.

QUANTITY OF WATER STORED IN THE WACHUSETT RESERVOIR
AND IN ALL THE STORAGE RESERVOIRS COMBINED
DURING 1921

Wachusett Reservoir.

At the beginning of the year the water in Wachusett Reservoir was at elevation 393.75, and the quantity of water stored in the reservoir was 63,292,000,000 gallons. Beginning January 8 and continuing through February 12 water was wasted from the reservoir to provide storage capacity for the spring freshet flows, so as to utilize as much waste water as possible for generating electric energy. The reservoir filled to the designed high-water line, elevation 395, on April 2 and remained at about that elevation until June 10. The highest stage reached was elevation 396.06 on May 2 and the quantity of water stored in the reservoir was then 66,402,700,000 gallons.

The maximum rate at which water was wasted from the reservoir was 1,055,000,000 gallons per day on May 2, the flow being at the rate of 763,000,000 gallons per day at the wasteway and at the rate of 292,000,000 gallons per day through the waste pipes.

After August 1 the water in the reservoir dropped about 2.4 feet per month to elevation 386.62 on November 10, which was the lowest stage reached. At that time the quantity of water stored in the reservoir was 54,065,900,000 gallons.

During the year 9,693,200,000 gallons of water, or about 15 per cent of the capacity of the reservoir, was wasted into the Nashua River in addition to 558,600,000 gallons discharged into the river in accordance with the provisions of chapter 488 of the Acts of 1895. Of the waste water, 4,575,200,000 gallons were utilized for generating electric energy.

On September 7 a contract was made with the Central Building Company of Worcester for facing with granite the crest of the circular dam over which the Quinapoxet River flows as it enters the reservoir at Oakdale. The work includes the excavation of about 75 cubic yards of concrete masonry, the placing of about 70 cubic yards of granite masonry and the necessary incidental work. The granite facing is about 170 feet in length, 1 foot 8 inches in thickness and 7 feet 10 inches in width measured around the curved surface, which is rough pointed. The contract price for this work is \$11,450 and at the close of the year about 90 per cent of the work is completed.

The tile and copper roof of the masonry building below the dam, used for offices and power station, temporarily repaired last year, has been permanently repaired this year at a cost of \$1,800 by the W. P. Leavitt Sons Company and is now water tight.

Wire fences were erected for a distance of 9,112 feet, stone walls were repaired or topped with wire fencing for a distance of 3,120 feet and stone walls were rebuilt for a distance of 314 feet along property lines and highways. The posts for this work were obtained from the water works lands.

The usual miscellaneous work has been done in connection with the care of the reservoir, water works lands and buildings; the brush and weeds were cut and burned for a distance of 32 miles along the margin of the reservoir, adjacent highways and brooks and rivers which flow directly into the reservoir; a short stretch of shore line at South Bay was paved to protect the adjacent highway from erosion; extensive repairs were made on granolithic walks at the dam and alterations and repairs were made at all of the water works buildings.

Standing grass on 324 acres of water works land was sold for the sum of \$1,856.95.

Many trees on water works lands and the shrubbery on the grounds about the dam were seriously damaged by the ice which formed on them during the sleet storm of November 26 to 29, and the scars will disfigure the landscape for many years.

Sudbury Reservoir.

From the first of the year until April 18, when the flashboards were placed on the overflow at the dam, the water in the Sudbury Reservoir was held about a foot below the crest of the overflow, but following the heavy rainfall the last of April about 57,000,000 gallons overflowed from the reservoir. During the summer and until the flashboards were removed on November 21, the water in the reservoir was held a few inches below the top of the flashboards.

From November 28 to December 1 the Electric Company was unable to take energy from the Sudbury power station because of damage to its transmission line from the ice which formed during the sleet storm, and it was necessary to draw 189,000,000 gallons of water through the lower gates under turbine No. 1 to maintain the water supply.

A sheet-iron building 18 feet in width and 19 feet in length was erected at the southerly end of the dam for storage of boat and flashboards during the winter.

The usual care has been taken of the reservoir lands and the grounds and structures at the dam. In connection with this work brush and weeds were mowed on the shore of the reservoir, structures were repaired, some painting was done, 8 tons of hay were cut, and the walks and drives were kept in order.

Framingham Reservoir No. 3.

As in former years the elevation of the water in Framingham Reservoir No. 3 has been regulated so as to secure efficient operation of the Sudbury power station and to maintain the supply in the Sudbury Aqueduct. The flashboards were not removed from the overflow at the dam during the year, but the elevation of the water varied through a range of 5 feet, and more than 7,500,000,000 gallons were wasted from the reservoir into Framingham Reservoir No. 1.

The gatehouse embankments and grounds at the dam were given the usual attention and sprouts and brush were cut in the lanes along the property lines.

Framingham Reservoirs Nos. 1 and 2, Ashland, Hopkinton and Whitehall Reservoirs.

No water has been drawn for water supply in recent years from the southerly portion of the Sudbury watershed, including the area of 46.98 square miles tributary to five of the storage reservoirs. The last draft for supply from Framingham Reservoir No. 1 was in 1903, from Framingham Reservoir No. 2 in 1912, and from Ashland, Hopkinton and Whitehall reservoirs in 1911. Water from these reservoirs is inferior in quality to the water from Wachusett, Sudbury and Framingham No. 3 reservoirs and is not now acceptable for use in its natural state. The reservoirs are therefore kept substantially full during the year and the entire yield tributary thereto is wasted into the Sudbury River below the dam at Framingham Reservoir No. 1.

The grounds and structures at all of the reservoirs have been cared for as usual and the lanes along the property lines have been kept open. At the foreman's headquarters on Salem End Road additional garage facilities are being provided.

The ironwork of the Fountain Street bridge over Reservoir No. 2 was thoroughly cleaned and painted, and the portion of Fountain Street maintained by the Division was repaired to match the adjoining portion of the street which is maintained by the town of Framingham. As the bridge has been in service since 1879 the ironwork was carefully measured in connection with these repairs so that its strength can be calculated to see if it is safe for present-day traffic.

At Whitehall Reservoir the width of the wasteway in the lower dam below Wood Street was widened from 4 to 8 feet, and side walls were built along the brook channel for a distance of 100 feet below Wood Street. In November and December the town of Hopkinton pumped about 400,000 gallons of water from the reservoir to supplement its regular supply.

Farm Pond.

No water has been used by the Metropolitan Water District from Farm Pond since it was acquired from the city of Boston January 1, 1898. It was last used as a source of water supply by the city in September, 1892, and some water was also drawn from the pond in June of that year to replenish the supply in Lake Cochituate. No water was turned into the pond from an outside source and no water was wasted from the pond this year and its elevation did not vary more than 1 foot from the usual high-water line. No water has been let into the pond from the Sudbury Aqueduct since June 26, 1918, and none has been let out of the pond at the sluiceway in the dike since February, 1903. Under rights reserved by legislation the town of Framingham pumped approximately 184,400,000 gallons of water from the filter galleries on the easterly shore of the pond and the railroad companies took approximately 129,600,000 gallons of water directly from the pond for use of locomotives during the year. The Water Division lands and structures at the pond have been given the usual attention.

Lake Cochituate.

Lake Cochituate was kept ready for use in case of emergency but was not used as a source of water supply during the year, although all preparations were made December 12 to draw water from this source if it was found necessary to interrupt the flow in the Sudbury Aqueduct while the "cave-in" over the aqueduct in South Natick was being repaired.

Water was wasted from the lake from January 1 to June 7 and from November 19 to the end of the year. The total quantity wasted was about 5,700,000,000 gallons. The waste was regulated so as to keep the water about one or two feet below high-water line. No water has been diverted from the Sudbury watershed to Lake Cochituate since water was drawn from Framingham Reservoir No. 3 for this purpose in April, 1914.

Brooks and drainage channels and appurtenances have been cleaned and cared for, lanes along property lines have been kept free from brush and sprouts and 3.6 miles of new lanes have been cut along the property line at the northerly end of the lake. The usual care has been taken of grounds and buildings and garage facilities are being increased and made satisfactory for use in cold weather.

AQUEDUCTS.

Wachusett Aqueduct.

Water was drawn from the Wachusett Reservoir through the Wachusett Aqueduct on 299 days. The aqueduct was in use 162 days, 8 hours and 51 minutes and the water drawn, 42,160,700,000 gallons, is equivalent to an average of 115,509,000 gallons a day for the entire year. All of the water was used for generating electric energy at the power station before it entered the aqueduct. At the terminal chamber 76,322,000 gallons of water, equivalent to 209,000 gallons a day, was pumped from the aqueduct by the Westborough State Hospital.

Wire fences were erected on property lines for a distance of 5,583 feet at a cost of 20 cents a foot, exclusive of the posts, which were obtained from Water Division lands.

A drainage ditch was constructed on the northerly side of the open channel in Marlborough for a distance of 575 feet through a swamp, at a cost of \$636.32, and brush, grass and weeds were mowed for a distance of 10 miles at a cost of about \$250 a mile.

Sudbury Aqueduct.

Water was drawn from Framingham Reservoir No. 3 through the Sudbury Aqueduct continuously, with the exception that on December 12 water was shut off from 11.30 A.M. to 8.30 P.M. in connection with a "cave-in" over the aqueduct at Union Street in South Natick.

Of the 25,140,500,000 gallons of water drawn from the reservoir, about 190,900,000 gallons were pumped from the aqueduct by the town of Framingham to supplement its supply from the filter galleries at Farm Pond, about 4,000,000 gallons were wasted in connection with the examination of the interior of the aqueduct at Union Street in South Natick, and 24,945,600,000 gallons, equivalent to an average of 68,344,110 gallons per day, were delivered into Chestnut Hill Reservoir.

On December 9, following the heavy rainfall of November 26 to 30, with a precipitation of 4 inches, a large settlement occurred in the ground over the aqueduct at Union Street, South Natick. An interior examination of the aqueduct showed that it was not damaged and apparently is in the same condition as when built in 1875. The cavity resulting from the settlement was filled with clean gravel.

The usual work of disposing of brush, grass and weeds along the aqueduct, painting ironwork, cleaning culverts, repairing fences and caring for the lands and structures has been done.

Weston Aqueduct.

Water was drawn from the Sudbury Reservoir into the Weston Aqueduct on 303 days and the aqueduct was in use for 201 days, 22 hours and 30 minutes.

Of the 18,992,500,000 gallons of water drawn from the reservoir, 16,247,400,000 gallons, equivalent to an average of 44,513,425 gallons a day, were delivered into the Weston Reservoir and 2,745,100,000 gallons were diverted at the head house into Framingham Reservoir No. 3.

The aqueduct lands and buildings and the fences, culverts and other appurtenances, have received the usual care and attention, and new stop-planks were provided for use at the head house.

Cochituate Aqueduct.

The Cochituate Aqueduct was not used during the year but has been kept ready for use in case of emergency. The grass, brush and weeds have been mowed on the aqueduct lands, ironwork has been painted, fences and structures on the line of the aqueduct have been repaired where necessary and culverts have been kept open.

PROTECTION OF THE WATER SUPPLY.

A sanitary inspector, two watershed inspectors and three watchmen were employed to examine the condition of premises on the watersheds and prevent pollution of the water in the reservoirs.

Filters have been maintained at Sterling, Sterling Junction, West Boylston, Marlborough and Natick to prevent pollution entering the water supply at these places. During large flows all surface water in excess of the capacity of the filters at Sterling, Marlborough and Natick was sterilized with calcium hypochlorite.

The swamp drainage ditches, which have a total length of 36.78 miles, were cleaned and kept in repair to improve the quality of the water.

The work of improving the portion of Gates Brook, located in the part of West Boylston known as the "Settlement," which was begun in 1915 and was suspended on account of unfavorable conditions during 1918, 1919 and 1920, was completed during 1921. The work done the past year includes 3 concrete culverts and 3 concrete headwalls, 3 brick manholes, 501 feet of open channel with board bottom, 695 feet of 24-inch vitrified pipe and iron pipe drain and the erection of 4,844 feet of wire fence, and cost \$8,400.84.

Wire fences were built on property lines on the easterly side of Big Crane Swamp, in Northborough and Westborough, for a distance of 5,756 feet, to keep cattle in adjoining pastures out of the drainage ditches.

A parcel of woodland on the Stillwater River in Sterling, containing about 11 acres, was purchased of Agnes I. Griffin for additional protection of the water supply.

CLINTON SEWAGE DISPOSAL WORKS.

Works for disposing of the sewage of the town of Clinton have been operated as required by chapter 557 of the Acts of 1898.

From January 19 to February 7, inclusive, and May 3 to 10, inclusive, the flow in the intercepting sewer exceeded the capacity of the pump, and from November 29 to December 2, inclusive, no electric energy was available for operating the pump because the transmission line was broken by the ice which formed during a severe sleet storm. During these periods the sewage overflowed into the Nashua River and was diluted with sufficient water discharged from the Wachusett Reservoir to prevent objectionable conditions. The pumping station statistics are as follows:—

Total pumpage (gallons)	429,352,000
Average for the year (gallons per day)	1,176,000
Electric energy used (kilowatt hours)	148,305
Pumpage per kilowatt hour (gallons)	2,895
Average lift (feet)	49.7
Efficiency of pumping unit, including energy lost in transmission and in heating station (per cent)	50.2
Coal used for burning sludge (pounds)	41,995

Cost of pumping:

Labor	\$2,051 86
Electric energy	786 02
Coal for burning sludge	157 54
Repairs and supplies	827 99

Total	\$3,823 41
-----------------	------------

Cost per million gallons	\$8.905
Cost per million foot gallons	.179

Electric heating apparatus was installed in the engine room at a cost of \$622.02, in place of the steam-heating apparatus abandoned in 1920 in connection with the disposal of the old steam pumping plant.

The cost of filtration has been as follows:—

Labor	\$8,050 60
Supplies and expenses	1,283 94

Total	\$9,334 54
-----------------	------------

Cost per million gallons	\$21.741
------------------------------------	----------

For several years the quantity of sewage to be disposed of has exceeded the efficient capacity of the filters, so that it was necessary to operate them continuously instead of intermittently most of the time. The resulting incomplete purification clogged the filters, so that this year it was necessary to dispose of the sewage by irrigation on the water works lands adjoining the filters while they were being drained and scraped and prepared for winter service.

FORESTRY.

The year's planting includes 81,900 pine seedlings on Wachusett lands, 47,600 on Sudbury lands, 9,600 along the Sudbury and Cochituate aqueducts and 20,800 pine seedlings and 5,000 Norway

spruce seedlings set out on Sudbury lands to fill in previous plantings.

Objectionable growths which were interfering with the growth of the seedlings have been cut from 76 acres of planted land in the Wachusett section, and from about 100 acres in the Sudbury section.

Brush, grass and weeds were mowed for a width of 40 feet along 16 miles of fire guard, for a width of 15 to 45 feet along 36 miles of forest roads, and for a width of 100 feet along 12 miles of main highways in the Wachusett and Sudbury sections.

Diseased chestnut trees were cut from about 12 acres of Wachusett lands by the Water Division forces, and from about 14 acres of Sudbury land at Whitehall Reservoir by the Howe Lumber Company, which purchased the timber for \$1,600.

Work of destroying the gypsy moth, pine-tree weevil and other insects has been undertaken so far as practicable with the resources available, and about \$11,000 was expended for this work by the Division.

The work undertaken in 1920 to prolong the life of the fine row of English elm trees along Beacon Street at the Chestnut Hill Reservoir has been continued, and \$2,641.13 was expended on this work during the year.

An unusual storm which began in the early afternoon of Saturday, November 26, and ended about noon Tuesday, November 29, consisting of rain, sleet, hail and snow, caused damage which is beyond description to trees and shrubs over all of the water works lands. Nothing like it has previously occurred in the history of the works. Many branches and even large limbs were broken off by the weight of the heavy coating of ice which formed on them, leaving the growth which has not been cut off with scars that will remain for many years.

The total expenditure during the year chargeable to forestry is \$34,966.70.

HYDRO-ELECTRIC SERVICE.

During the year 16,079,148 kilowatt hours of electric energy were delivered from the hydro-electric stations operated by the water drawn from the Wachusett and Sudbury reservoirs. The total value of this energy at contract prices, including rentals of \$139 for transmission line locations, is \$90,106.13. The total expense charged to operation of both stations and transmission lines is \$54,537.94,

leaving a profit from the operation of the stations of \$35,568.19, equivalent to \$2.212 per thousand kilowatt hours. Of the total energy delivered from both stations this year, 1,747,100 kilowatt hours of energy, for which \$10,028.85 was received, were generated with water wasted from the reservoirs and not required for water supply.

Wachusett Service.

On account of delay in receiving the new casting the work of repairing turbine No. 4, which was in progress last year, was not completed until November 22. The expenditure this year in connection with the repairs is \$1,090.43.

At a cost of \$1,251.58 an emergency control gallery with three approaches has been installed in the head-gate room over the aqueduct and separated from the generator room by a brick wall 12 inches in thickness. From the gallery the hydraulic valves controlling the flow of water to all of the turbines can be operated, the positions of the valves being shown at all times by electric lights.

A modern open system governing equipment, including four Type T governors for the main turbines, a Type F governor for one of the exciter turbines, and a central pumping plant to furnish power for operation, was purchased of the Lombard Governor Company, and the work of installing the equipment in place of the old unreliable closed system governing equipment is now in progress. The total expenditure on account of the work was \$8,385 at the close of the year.

On account of the damage to the New England Power Company's lines and to the overhead portions of the Water Division 13,800-volt connecting lines, caused by the weight of the ice coating which formed on the lines during the unusual storm of November 26 to 29, the regular operation of the Wachusett power station was interrupted for several days while the lines were being repaired.

The Water Division's 13,800-volt line failed on November 28 and was repaired on the 29th, but during this interruption some energy was delivered from the power station over the 2,300-volt line for operating the Clinton sewerage pumping station and lighting a section of the town of Clinton. The 66,000-volt transmission line was not injured, but could not be used until December 1 because of failure of connecting lines.

The Wachusett power station was operated on 300 days. The statistics for the year 1921 are as follows:—

Total energy developed (kilowatt hours)	10,001,900
Energy used at power station (kilowatt hours)	17,743
Available energy (kilowatt hours)	9,984,157
Water used (gallons)	46,735,900,000
Average head (feet)	96.7
Energy developed per million foot gallons (kilowatt hours)	2.213
Efficiency of station (per cent)	70.4

Credits:

Energy sold New England Power Company and Edison Electric Illuminating Company, 9,835,- 852 kilowatt hours at \$0.0053	\$52,130 02
Deduction of 2 per cent as provided in contract, 196,717 kilowatt hours at \$0.0053	1,042 60
	\$51,087 42
Energy furnished Clinton sewerage pumping sta- tion, 148,305 kilowatt hours at \$0.0053	786 02
Rental, transmission line location	139 00
	\$52,012 44

Charges:

Superintendence	\$1,783 00
Labor, operating station	10,688 32
Repairs and supplies:	
Power station	\$7,411 52
Transmission line	93 99
	7,505 51
	\$19,976 83
Taxes	3,250 00
Administration, general supervision, interest and sinking fund	10,116 39
	33,343 22
Profit	\$18,669 22
Cost of available energy per thousand kilowatt hours	\$3.340

Sudbury Service.

The hydro-electric station at the Sudbury Dam in Southborough was operated on 301 days. With the exception of 189,000,000 gallons by-passed under turbine No. 1, November 28 to December 1, for water supply when the electric companies' lines were crippled by ice and they were unable to take energy from the station, and

57,000,000 gallons wasted at the overflow on May 1, all the water drawn from the Sudbury Reservoir was used to generate energy.

During the year 6,383,000,000 gallons of water not required for water supply were utilized for generating 809,700 kilowatt hours of energy, which was sold for \$5,060.63.

Several new turbine bearings were installed, all the machinery below the floor was scraped and painted with red lead and the slip rings on No. 3 generator were resurfaced.

On December 1 and 2 energy was supplied from the Sudbury power station to the New England Power Company to maintain the electric service in Marlborough, because of the damage to the companies' transmission lines by ice.

The Sudbury hydro-electric statistics for 1921 are as follows:—

Total energy developed (kilowatt hours)	6,105,130
Energy used at power station (kilowatt hours)	10,139
Available energy (kilowatt hours)	6,094,991

Framingham Reservoir No. 3 service:

Water used (gallons)	28,848,400,000
Average head (feet)	65.5

Weston Aqueduct service:

Water used (gallons)	18,803,500,000
Average head (feet)	37.4
Energy developed per million foot gallons (kilowatt hours)	2.355
Efficiency of station (per cent)	75.0

Profit	\$16,898 97

Cost of available energy per thousand kilowatt hours	\$3.477
--	---------

DISTRIBUTION PUMPING STATIONS.

The total quantity of water pumped at the five distribution pumping stations during the year was 29,428,510,000 gallons, 3,216,270,000 gallons, or 9.85 per cent less than the quantity pumped in 1920. Of the total quantity of water supplied the Metropolitan Water District in 1921, about 68 per cent was pumped for the northern low, high and extra high services and the southern low service, and $\frac{65}{100}$ per cent was repumped for the southern extra high service.

The total cost of operating all the pumping stations for the year 1921 was \$240,720.70. Compared with the previous year there is an increase of about \$6,400 for operating labor, an increase of about \$4,500 for fuel, a decrease of about \$19,700 for repairs, and a decrease of about \$600 for miscellaneous supplies, making a total decrease of about \$9,400.

Fuel.

At the beginning of the year there were 2,540 net tons of bituminous coal and 1,825 net tons of anthracite screenings on hand at the pumping stations. During the year 7,792 net tons of bituminous coal and 2,370 net tons of anthracite screenings were purchased. At the close of the year 2,515 net tons of bituminous coal and 655 net tons of anthracite screenings are on hand at the pumping stations.

During the early part of the year 1,783 net tons of bituminous coal were purchased from the New England Fuel and Supply Company for \$3.50 to \$5.60 per ton at the mines, 420 net tons were purchased from the Andersen Coal Sales Company for \$3.10 to \$5 per ton at the mines, and 127 net tons were purchased from the Lehigh Valley Coal Sales Company for \$3.25 to \$3.85 per ton at the mines.

The remainder of the bituminous coal for the Chestnut Hill, Arlington and Hyde Park stations, amounting to 4,747 net tons, was purchased of the William A. Jepson Corporation at a base price of \$3.75 a net ton at the mines for 14,550 heat units per pound of dry coal, and in case of variation in quality a corresponding variation was made in the price of the coal.

Beginning May 4 the bituminous coal for the Spot Pond station was purchased of the Locke Coal Company, 399 net tons being purchased prior to October 1 for \$9.25 per ton delivered in the bins and 316 net tons were purchased after October 1 for \$9.65 per ton delivered in the bins.

Of the 2,370 net tons of anthracite screenings purchased, 752 tons were furnished by the New England Fuel and Supply Company for \$2.59 per ton at the mines, and 1,618 tons were purchased from local coal yards for \$3.95 to \$5.50 per ton.

Pumping Statistics.

The pumping statistics for the various stations are as follows:—

Station No. 1.

Pumpage and Duty.

	Engines Nos. 1 and 2.	Engine No. 3.	Engine No. 4.	Totals.
Pumping capacity (million gallons per day)	16	20	30	66

Southern High Service:		
Fisher Hill Reservoir, Brookline	251.00	15,500,000
Waban Hill Reservoir, Newton	264.50	13,500,000
Forbes Hill Reservoir, Quincy	192.00	5,100,000
Forbes Hill Standpipe, Quincy	251.00	330,000
Southern Extra High Service:		
Bellevue Reservoir steel tank, West Roxbury district of Boston	375.00	2,500,000
Total	—	2,399,230,000

¹ Elevation in feet above Boston city base.

By arrangement with the city of Chelsea a portion of the maintenance of its reservoir on Powder Horn Hill is assumed by the Metropolitan Water Works, and the reservoir is used when necessary in connection with the northern high-service supply. The reservoir has a capacity of 1,000,000 gallons with high-water line at elevation 196.6. The reservoir was in service from January 6 to April 13, and from December 23 to 31, and was kept full of water during the remainder of the year for use in case of emergency.

By arrangement with the city of Malden its standpipe on Waitt's Mount, with a capacity of 1,120,000 gallons to high-water line at elevation 250, is maintained by the Division. It has been kept full of water and was used for emergency supply on January 6 and 7 while a break in the 36-inch northern high-service supply main in Fellsway East was being repaired.

The lands, trees, shrubs and structures at all of the distribution reservoirs have been cared for as usual, gates and screens have been operated as required and buildings have been repaired and painted where necessary.

DISTRIBUTION PIPE LINES.

The length of the distribution pipe lines owned and operated at the close of the year is 126.22 miles.

The pipe lines have been patrolled and the work of municipalities, public service corporations and other parties in any way affecting the lines has been inspected. The valves, valve chambers and other appurtenances have been kept in good condition and salt was placed on covers of important valves to keep them free from ice during cold weather.

The two meter register chambers at Cleveland Circle in Brighton were relocated in connection with the rebuilding of the streets, and the meter register chamber at Harvard Street at the Brookline-Boston boundary line was relocated in connection with the construction of a garage.

A 20-inch Venturi meter with 10-inch throat was installed at the connection with the city of Newton main in Ward Street at Hammond Street, to measure water pumped by the city from the Metropolitan water main.

A 24-inch check valve was installed in Beale Street at Adams Street in Quincy and changes were made in the connection with the city main on Beale Street at Summit Avenue, so that the city now has two independent metered connections and the head lost by friction has been materially reduced.

The steelwork of the pipe bridges at Walnut Street in Somerville, Massachusetts Avenue in Cambridge and College Avenue in Medford was cleaned and painted two coats of red lead.

There are now 72 Venturi meters from 6 to 60 inches in diameter in the distribution pipe lines. Sixty-three of these, and 12 smaller Disc, Torrent and Detector meters, and 3 Union and 1 Crown meter owned by the town of Milton, and 1 Detector meter owned by the city of Malden, are regularly used for measuring the water supplied to the various cities and towns.

The nine pressure regulating valves in the distribution mains for reducing the pressure of the water supplied to Nahant, Revere, Swampscott and Winthrop and to portions of Chelsea, East Boston and Hyde Park have given satisfactory service.

Recording pressure gages have been maintained at 21 stations on the distribution system and tables in the Appendix show the

hydraulic grade at 18 of these stations as determined from the charts.

A break occurred in the 36-inch northern high-service main in Fellsway East in Malden about 9.15 p.m., January 6, from which about 2,000,000 gallons of water escaped before the line was shut off, and caused considerable damage in the street but did no injury to private property. Repairs were completed and the line was in service again at 7 p.m., January 7. The cost of the repairs was \$992.98.

In June seven lead-joint leaks were repaired in the 36-inch submerged pipe lines under the Mystic River at Wellington bridge in Somerville, and one was repaired in the 36-inch submerged pipe lines under the Charles River at Magazine Street in Cambridge. A scow and diver were used in repairing these leaks and the total cost of the work was \$1,671.10.

In July a cracked 48-inch pipe was removed from one of the low-service mains in front of Chestnut Hill pumping station No. 2 and a sound pipe laid at a cost of \$451.88.

Leaks at 6 defective wooden joints were repaired at a cost of \$215.50 and 33 other leaks were repaired during the year at a cost of \$1,251.89. Of these, 30 were at lead joints.

A complete stock of pipes, specials and other materials and supplies required for maintaining and operating the pipe lines has been kept on hand at the Glenwood pipe yard in Medford and at the Chestnut Hill pipe yard in Brighton, and an auto truck equipped with a gate-operating attachment has been stationed at each yard with men on duty ready to operate them in case of emergency at any time during the day or night.

CONSUMPTION OF WATER.

During the year 42,853,711,000 gallons of water were furnished to the 18 cities and towns supplied in the Metropolitan Water District. This is equivalent to an average daily consumption of 117,407,400 gallons, and, for the estimated population of 1,239,740, is at the rate of 95 gallons per capita per day, and compared with a per capita use of 105 gallons per day in 1920 shows a reduction of nearly 10 per cent.

The population, consumption of water and per cent of services metered in the Metropolitan Water District as supplied in 1921, and

for the period from 1890 to 1921, inclusive, are shown graphically by the accompanying diagram.

The average daily consumption of water in each of the municipalities in the Metropolitan Water District supplied during 1920 and 1921, as measured by the Metropolitan Water Works meters, is as follows: —

	Estimated Popula- tion, 1921.	AVERAGE DAILY CONSUMPTION.				
		1920.		1921.		Decrease in Gallons.
		Gallons.	Gallons per Capita.	Gallons.	Gallons per Capita.

District	1,239,740	127,265,500	105	117,407,400	95	9,858,100

¹ Increase.

During 1921 there was a decrease in consumption as compared with 1920 in two-thirds of the municipalities supplied, a decrease for the entire district supplied of nearly 10,000,000 gallons a day, and a decrease in the per capita consumption of 10 gallons per day. The consumption by districts in 1921 as compared with 1920 is as follows: —

POPULATION, CONSUMPTION OF WATER AND PER CENT OF SERVICES METERED
IN THE
METROPOLITAN WATER DISTRICT
AS SUPPLIED IN 1921
FROM 1890 TO 1921

Note: Estimated population and consumption per capita given on diagram published in annual reports 1916 to 1919 inclusive have been revised and are here shown in accordance with 1920 census.

	Gallons per Day, 1921.	DECREASE FROM 1920.

¹ The number of new services installed and the number of new services equipped with meters do not always agree for the reason that service pipes are installed but meters are not set until the buildings are permanently occupied.

² Boston: Number of meters required to be set each year on old services, 4,438 for 1908, 1909 and 1910; reduced to 4,225 in 1911 on account of reduction in number of old services and increased to 4,276 after 1911 on account of unmetered services acquired by the annexation of Hyde Park. Boston exempt from setting meters on old services in 1917 and 1918. (Chapter 269, Special Acts of 1917, and Chapter 45, Special Acts of 1918.)

³ Chelsea: 2,810 services destroyed during conflagration in April, 1908; 987 metered services remained after conflagration.

WATER SUPPLIED OUTSIDE OF METROPOLITAN WATER DISTRICT.

During the year 485,696,000 gallons of water were supplied from the Metropolitan Water Works for use outside the Metropolitan Water District, for which \$9,307.48 was charged, as follows: —

PLACES SUPPLIED.	Total Quantity (Gallons).	Average Quantity (Gallons per Day).	Number of Days on which Water was supplied.	Amounts charged for Water supplied.
Westborough State Hospital	76,322,000	209,000	365	\$2,239 66
Town of Framingham:				
From Sudbury Aqueduct	190,900,000	523,014	365	4,581 60
From Filter-gallery at Farm Pond . .	184,400,000	505,205	365	353 64

Peddock's Island	22,066,000	60,500	365	1,380 58
Portion of town of Saugus	12,008,000	32,900	365	702 00

QUALITY OF THE WATER.

The yearly average results of the chemical analyses made by the Department of Health of the Commonwealth since 1892, and of the biological and bacteriological examinations made in the Metropolitan Water Works laboratory of water from the service taps in Boston since 1898, are given in tables in Appendix No. 2.

ENGINEERING.

In addition to making the usual surveys, plans, computations, investigations, estimates, reports and summaries of water works statistics in connection with the maintenance and operation of the works, considerable engineering work has been done in connection with the construction of the additional distribution works required by the growth of the District.

Information and assistance was furnished the Attorney-General's Department in connection with the claim for large damages made against the Commonwealth by the town of Stoneham on account of the taking of Spot Pond in 1898. The hearings in the case were begun April 21 and ended August 11, and the report of the Commis-

sioners, finding that Stoneham suffered no damage, was made December 17.

In the Appendix are tables giving additional information relating to the operation of the Metropolitan Water Works for the year 1921 and the usual water works statistics.

Respectfully submitted,

WILLIAM E. FOSS,

Director and Chief Engineer.

BOSTON, January 2, 1922.

REPORT OF DIRECTOR AND CHIEF ENGINEER OF SEWERAGE DIVISION.

JAMES A. BAILEY, *Commissioner, Metropolitan District Commission.*

DEAR SIR: — The following report of the operations of the Metropolitan Sewerage Works for the year ending December 31, 1921, is respectfully submitted: —

ORGANIZATION.

The Director and Chief Engineer has charge of the design and construction of all new works, and of the maintenance and operation of all the works controlled by the Metropolitan District Commission for removing sewage from the twenty-six municipalities which comprise the Metropolitan Sewerage Districts.

The following assistants have been employed during the year: —

Henry T. Stiff	Senior Assistant Engineer, in charge of office and drafting room and of the construction work.
Clarence A. Moore	Assistant Engineer, in charge of maintenance studies and records and of construction work on the North Metropolitan System.
George W. Wood	Assistant Engineer, in charge of survey work and field work in connection with the Wellesley extension construction.
Ralph W. Loud	Assistant Engineer, in charge of survey work and field work in connection with the Reading extension construction.
Thomas L. Whelan	Superintendent, North Metropolitan Sewerage District.
Arthur F. F. Haskell	Superintendent, South Metropolitan Sewerage District.

In addition to the above, the number of engineering and other assistants employed during the year was 9, which includes 1 instrumentman, 3 inspectors, 1 draftsman, 2 rodmen and engineering assistants and 2 stenographers.

METROPOLITAN SEWERAGE DISTRICTS.

AREAS AND POPULATIONS.

During the year no changes have been made in the extent of the metropolitan sewerage districts.

The populations of the districts, as given in the following table, are based on the census of 1920.

Table showing Ultimate Contributing Areas and Present Estimated Populations within the Metropolitan Sewerage Districts, as of December 31, 1921.

CITY OR TOWN.		Area (Square Miles).	Estimated Population.

¹ Part of town.

METROPOLITAN SEWERS.

SEWERS PURCHASED AND CONSTRUCTED AND THEIR CONNECTIONS.

During the year there have been built 0.541 miles of metropolitan sewers within the sewerage districts, so that there are now 118.113 miles of metropolitan sewers. Of this total, 9.642 miles of sewers, with the Quincy pumping station, have been purchased from cities and towns of the districts. The remaining 108.471 miles of sewers and other works have been constructed by the metropolitan boards.

The locations, lengths and sizes of these sewers are given in the following tables, together with other data referring to the public and special connections with the systems: —

NORTH METROPOLITAN SEWERAGE SYSTEM.

¹ Includes .355 of a mile of sewer purchased from the city of Boston.² Includes .446 of a mile of pipe and concrete sewers built for the use of the city of Boston; also .026 of a mile of sewer purchased from the town of Watertown.³ Includes 1.24 miles of sewer purchased from the city of Boston.⁴ Includes .158 of a mile of pipe sewer built for the use of the town of Brookline.⁵ Hull and Needham are not parts of the Metropolitan Sewerage District.⁶ Includes .025 of a mile of sewer purchased from the town of Watertown.⁷ The metropolitan sewer extends but a few feet into the town of Wellesley.

Information relating to areas, populations, local sewer connections and other data for the metropolitan sewerage districts appears in the following table: —

North Metropolitan Sewerage District.

Area (Square Miles).	Estimated Total Population.	Miles of Local Sewer connected.	Estimated Population contributing Sewage.	Ratio of Contributing Population to Total Population (Per Cent.).	CONNECTIONS MADE WITH METRO- POLITAN SEWERS.	
					Public.	Special.
100.32	643,030	800.21	588,430	91.5	321	574

South Metropolitan Sewerage District.

110.76	488,960	703.00	374,960	76.7	152	46
--------	---------	--------	---------	------	-----	----

Both Metropolitan Sewerage Districts.

211.08	1,131,990	1,503.21	963,390	85.1	473	620
--------	-----------	----------	---------	------	-----	-----

Of the estimated gross population of 1,131,990 on December 31, 1921, 963,390 representing 85.1 per cent, were on that date contributing sewage to the metropolitan sewers, through a total length of 1,503.21 miles of local sewers owned by the individual cities and towns of the districts.

These sewers are connected with the metropolitan systems by 473 public and 620 special connections. During the current year there has been an increase of 43.07 miles of local sewers connected with the metropolitan systems, and 5 public and 9 special connections have been added.

CONSTRUCTION.**NORTH METROPOLITAN SEWERAGE SYSTEM.****READING PUMPING STATION.**

The construction of a reservoir and pump well for this station was described in previous reports.

A pumping station building has been erected in Reading at the junction of Summer Avenue and Elm Street. This consists of a brick building 26 by 32 feet and basement, having a slate roof and concrete floors. This building was practically completed on October 15, 1921.

In this building are located two pumping units. This machinery, which was furnished by the Starkweather & Broadhurst Company of Boston, consists of one 2,500,000-gallon capacity centrifugal

pump and one 4,000,000-gallon capacity centrifugal pump operating against a head of 65 feet and actuated by electric motors of 75 horsepower and 100 horsepower, respectively. The pumps were built by the Morris Machine Works, and have 8-inch and 10-inch discharge pipes, respectively. They are located in a pit which is 44 feet below the level of the floor of the station, and are driven by vertical shafts which directly connect the motors with the pumps. The motors were manufactured by the General Electric Company, and are of the slip ring type. They are operated at speeds of 1,200 and 900 r. p. m., respectively, with a 60-cycle, 3-phase current of 440 volts. At present the current is supplied by the municipal plant of the town of Reading. Provisions have been made in the station for the installation of an engine of the semi-Diesel type, with a direct connected generator which will generate current on the premises.

Because of delay in the appropriation, and further delay on the part of the contractors in furnishing the machinery, the pumping units were not installed ready for use until December 7, 1921.

The construction of the pumping station building and the installation of the pumping machinery, including electrical equipments, were all done by the regular maintenance employees of the Metropolitan Sewerage Division.

SOUTH METROPOLITAN SEWERAGE SYSTEM.

WELLESLEY EXTENSION.

The only uncompleted work on this extension at the beginning of the year was a portion of Sections 100 and 101. These sections are fully described in last year's report. Work was completed and the sewer was opened for the use of the town of Wellesley on July 17, 1921.

MAINTENANCE.

SCOPE OF WORK AND FORCE EMPLOYED.

The maintenance of the Metropolitan Sewerage System includes the operation of eight pumping stations, the Nut Island screen-house and 118.113 miles of metropolitan sewers, receiving the discharge from 1,503.21 miles of town and city sewers at 473 points, together with the care and study of inverted siphons under streams and in the harbor.

Owing to the addition of about 11 miles of metropolitan sewers and an additional pumping station, it has been necessary to increase the permanent maintenance force. At present this consists of 172 men, of whom 107 are employed on the North System and 65 on the South System. These are subdivided as follows: North Metropolitan System, 64 engineers and other employees in the pumping stations, and 43 men, including foremen, on maintenance, care of sewer lines, buildings and grounds; South Metropolitan System, 36 engineers and other employees in the pumping stations, and 29 men, including foremen, on maintenance, care of sewer lines, buildings and grounds.

The regular work of this Department, in addition to the operation of the pumping stations, has consisted of routine work of cleaning and inspecting sewers and siphons, caring for tide gates, regulators and overflows, measuring flow in sewers, inspection of connections to the metropolitan sewers, and the care of pumping stations and other buildings and grounds.

In addition to these regular duties other work has been done by the maintenance employees of this Department, as follows:—

DEER ISLAND PUMPING STATION.

Repairs were made on the 12-inch salt-water injection pipe which furnishes water for the condensers. It was necessary to renew part of this pipe and to install a brass strainer.

Repairs to pump No. 3 in this station, consisting of the placing of a new composition sleeve on the 10-inch shaft, rebabbiting and otherwise repairing the bearing near the pump case, were completed.

A new 3-inch brass pipe for boiler feed use about 100 feet in length was installed.

EAST BOSTON PUMPING STATION.

A basement extending from the westerly end of the pumping station building to the third engine pit was constructed. This enables the inspection and repairing of pipes and conduits which were inaccessible.

The south chimney at this station became so badly cracked as to require its partial rebuilding. The defect occurred at a point about 18 feet below the top. A staging which was carried to the top of

the chimney was erected by the maintenance force to make an examination. A contract was entered into with Emil Malmstrom & Son Company for taking down and rebuilding the upper portion of the chimney. Work was finished on the repairs, which included repointing the entire chimney, on May 16, 1921.

The cylinders of the condenser pump for engine No. 3 were replaced by new ones which were constructed in the machine shop at this station.

Repairs were made to pump No. 3 at this station during the year. These consisted of a new sleeve on the 10-inch shaft, and repairs to one of the impellers of the pump which had been broken off about 6 inches from the outer end. The bearing of this pump was also rebabbitted.

CHARLESTOWN PUMPING STATION.

Two new sewage screens have been constructed and installed at this station.

The pumps, engines and pits at this station were repainted.

The 42-inch gate valve in the suction conduit leading to pump No. 1 became inoperative. This has been repaired.

QUINCY PUMPING STATION.

New cylinder linings were put in the 5,000,000-gallon Deane pump. A new throttle valve and connecting steam piping were also furnished for this pumping engine.

During the flood period of the year it was necessary to open the relief valve and discharge sewage on the salt-water marshes adjacent to this station. The pumping plant, although in good condition, was not able to handle the large sewage flow.

Recommendation to the Legislature was made by the Metropolitan Water and Sewerage Board in 1919 that an appropriation should be made for the installation of additional pumping machinery at this station. The Legislature, however, did not see fit to grant the appropriation.

NUT ISLAND SCREEN-HOUSE.

At this station considerable mechanical work for the north and south districts has been accomplished in addition to the regular work of operating the screen-house and the Hough's Neck pumping station. These consist chiefly of the making of over 3,600 pounds

of brass castings for various repair work in the pumping stations, and the overhauling and repairing and painting of the White automobile truck used in the south district, together with the complete overhauling of the machinery on board the naphtha towboat used in the harbor work.

A severe storm of last year so badly damaged the eastern slopes of Nut Island that it was necessary to build an additional sea wall. This new wall connects the existing wall near the wharf with the slope paving crossing the bar.

SEWERAGE DISTRICT MAP.

A new lithograph map of the Metropolitan Sewerage Districts, bringing the same up to July 1, 1921, has been published during the year. This was printed by the Walker Lithograph and Publishing Company.

OLD MYSTIC VALLEY SEWER.

That part of the old Mystic valley sewer which was constructed by the city of Boston in 1878 to protect the Mystic water supply extending between Cross Street and Prospect Street in Woburn was sold to the city of Woburn for a nominal sum. This sewer, which was owned by the Metropolitan Water Works and operated as a local sewer for the city of Woburn and maintained by the Metropolitan Sewerage Works, has been of considerable trouble and expense to the District. Its ownership and care were transferred to the city of Woburn December 22, 1921.

GASOLINE IN PUBLIC SEWERS.

The efforts to improve the condition of the metropolitan sewers in regard to dangers resulting from the introduction of gasoline into the same have been continued throughout the year and have been successful.

An inspector has been employed in this Department whose duty it is to visit existing garages and see that the separators are kept in proper condition, also to enforce the regulation concerning the installation of such separators at all newly constructed garages.

At the request of the Metropolitan District Commission the Department of Public Safety has made an effort to assist in the protection of the metropolitan sewers from gasoline. A set of

regulations concerning garages and their appurtenances has been published by them, and they have recognized the fact that by statute they are charged with the supervision and control of the effluent from these establishments which is discharged into the sewers.

During the year 94 new garages and other establishments using gasolene have been connected with the local sewer systems which discharge into the metropolitan sewers.

The following tables show the particulars in regard to establishments known to be using gasolene, and which are connected with the public sewerage systems of the different municipalities in the Metropolitan Sewerage Districts:—

DRAINAGE FROM TANNERIES, GELATINE AND GLUE WORKS IN WINCHESTER, WOBURN AND STONEHAM.

Four men and a foreman have been employed during a part of the year flushing and cleaning the metropolitan sewers through the tannery districts in Winchester, Woburn and Stoneham.

All the tanneries and glue works of the District now have settling tanks of substantial size. This method of treatment has very greatly reduced the amount of sludge material entering the metropolitan sewers.

The following table gives details of settling tanks introduced to date, showing the operations of same with the amount of sludge collected and removed:—

Table of Semi-fluid Sludge removed from Settling Basins at the Tanneries, Gelatine and Glue Works in Winchester, Woburn and Stoneham, Year ending December 31, 1921.

NORTH METROPOLITAN SYSTEM.

Deer Island Pumping Station.

At this station are four submerged centrifugal pumps with impeller wheels 8.25 feet in diameter, driven by triple-expansion engines of the Reynolds-Corliss type.

Contract capacity of 1 pump: 100,000,000 gallons, with 19-foot lift.

Contract capacity of 3 pumps: 45,000,000 gallons each, with 19-foot lift.

Average duty for the year: 53,200,000 foot pounds.

Average quantity raised each day: 68,600,000 gallons.

Force employed: 4 engineers, 1 relief engineer, 4 firemen, 4 oilers, 3 screenmen, 1 relief screenman and 1 laborer.

Coal used: bituminous, costing from \$9.28 to \$16.75 per gross ton.

Table of Approximate Quantities, Lifts and Duties at the Deer Island Pumping Station of the North Metropolitan System.

Alewife Brook Pumping Station.

The plant at this station consists of two 9-inch Andrews commercial centrifugal pumps, direct connected by horizontal shafts to compound marine engines, together with a pump and engine added later. The latter consists of a specially designed engine of the vertical cross-compound type, having between the cylinders a centrifugal pump rotating on a horizontal axis.

Contract capacity of the 2 original pumps: 4,500,000 gallons each, with 13-foot lift.

Contract capacity of new pump: 13,000,000 gallons, with 13-foot lift.

Average duty for the year: 19,000,000 foot pounds.

Average quantity raised each day: 4,591,000 gallons.

Force employed: 3 engineers, 1 relief engineer, 3 screenmen and 1 relief screenman.

Coal used: bituminous, costing from \$9.20 to \$13.48 per gross ton.

Table of Approximate Quantities, Lifts and Duties at the Alewife Brook Pumping Station of the North Metropolitan System.

Reading Pumping Station.

At this station are two submerged centrifugal pumps of 2,500,000 gallons per 24 hours, and 4,000,000 gallons per 24 hours, capacity. These operate against a maximum head of 65 feet, and are actuated by vertical shafts directly connected with 75 and 100 horsepower motors. Alternating current of 440 volts furnished by the municipal plant of the town of Reading is used.

Plant opened for use	December 7, 1921
Average gallons pumped per 24 hours	750,000

Force employed, 1 engineer-mechanic, 1 assistant and 1 watchman.

At present the effluent is nearly all ground water leakage into the local sewers. Effort is being made by the town to reduce this.

SOUTH METROPOLITAN SYSTEM.

Ward Street Pumping Station.

At this station are two vertical, triple-expansion pumping engines, of the Allis-Chalmers type, operating reciprocating pumps, the plungers of which are 48 inches in diameter with a 60-inch stroke.

Contract capacity of 2 pumps: 59,000,000 gallons each, with 45-foot lift.

Average duty for the year: 83,899,000 foot pounds.

Average quantity raised each day: 33,333,000 gallons.

Force employed: 4 engineers, 1 relief engineer, 4 firemen, 5 oilers, 4 assistant engineers, 1 machinist and 1 laborer.

Coal used: bituminous, costing from \$9.49 to \$10.90 per gross ton.

Material intercepted at screens during the year: 1,697.8 cubic yards.

Table of Approximate Quantities, Lifts and Duties at the Ward Street Pumping Station of the South Metropolitan System.

Nut Island Screen-house.

The plant at this house includes two sets of screens in duplicate actuated by small reversing engines of the Fitchburg type. Two vertical Dean boilers, 80 horse power each, operate the engines, provide heat and light for the house, burn materials intercepted at the screens, and furnish power for the Quincy (Hough's Neck) sewage lifting station.

Average daily quantity of sewage passing screens: 67,000,000 gallons.

Total material intercepted at screens: 1,118.4 cubic yards.

Material intercepted per million gallons of sewage discharged: 1.23 cubic feet.

Force employed: 3 engineers, 1 relief engineer, 3 screen men and 1 relief screen man.

Coal used: bituminous, costing \$9.09 per gross ton.

Quincy (Hough's Neck) Sewage Lifting Station.

At this station are two 6-inch submerged Lawrence centrifugal pumps with vertical shafts actuated by two Sturtevant direct-current motors.

The labor and electric energy for this station are supplied from the Nut Island screen-house, and as used at present it does not materially increase the amount of coal used at the latter station. The effluent is largely ground water.

Contract capacity of 2 pumps: about 1,500,000 gallons each, with 20-foot lift.
 Average daily amount pumped: 224,300 gallons.
 Average lift: 15.19 feet.

Coal delivered in the Bins of the Sewerage Pumping Stations during the Year.

METROPOLITAN SEWERAGE OUTFALLS.

The Metropolitan Sewerage Districts now have outfalls in Boston Harbor at five points, two of which may discharge sewage from the North District and three from the South District. These outfalls are all in good condition.

During the year the sewage of the North District has been discharged wholly through the outlet located near Deer Island light. The other outfall of this system is closed by a cast-iron cover which can be easily removed.

Of the outfalls of the South District, two extend for a distance exceeding one mile from the shore of Nut Island, Quincy, and the third one, called an emergency outlet, extends about 1,500 feet from the same. During the flood periods of May and July, 1921, all three of these outfalls were in operation. No discharge is made through the emergency outlet excepting at such flood periods.

During the year the average flow through the North Metropolitan District outfall at Deer Island has been 68,600,000 gallons of sewage per 24 hours, with a maximum rate of 151,200,000 gallons during an exceptionally stormy period in July, 1921. The amount of sewage discharged in the North Metropolitan District averaged 117 gallons per day for each person, taking the estimated population of

the District contributing sewage. If the sewers in this District were restricted to the admission of sewage proper only, this per capita amount would be considerably decreased.

In the South Metropolitan District an average of 67,000,000 gallons of sewage has passed daily through the screens at the Nut Island Screen-house, and has been discharged from the outfalls into the outer harbor. The maximum rate of discharge per day which occurred during an exceptionally stormy period in May, 1921, was 178,000,000 gallons. The discharge of sewage through these outfalls represents the amount of sewage contributed by the South Metropolitan District, which was at the rate of 179 gallons per day per person of the estimated number contributing sewage in the District.

The daily discharge of sewage per capita is considerably larger in the South Metropolitan District than it is in the North Metropolitan District, because, owing to the large size and unused capacity of the south district high-level sewer, more storm water is at present admitted to the sewers of this District.

Material Intercepted at the Screens.

The material intercepted at the screens at the North Metropolitan sewerage stations, consisting of rags, paper and other floating materials, has during the year amounted to 1,346.6 cubic yards. This is equivalent to 1.45 cubic feet for each million gallons of sewage pumped at Deer Island.

The material intercepted at the screens at the South Metropolitan sewerage stations has amounted to 3,180.2 cubic yards, equal to 3.51 cubic feet per million gallons of sewage delivered at the outfall works at Nut Island.

Studies of sewage flows in the metropolitan sewers and siphons indicate that they are free from deposit.

FREDERICK D. SMITH,

Director and Chief Engineer of Sewerage Division.

BOSTON, January 2, 1922.

	\$1,475,000 00

EXPENDITURES FROM LOANS.

The following tables show the total amount expended in each of the foregoing loans, the total cost of each reservation and park-

way to Dec. 1, 1921, and the amount charged by the Auditor's department to meet the sinking fund and interest requirements previous to Jan. 1, 1900. The item of "Miscellaneous" in these tables includes cost of construction of roads, buildings and of all other work of construction, and all other charges against these loans except those for land, general expenses, sinking fund and cost of maintenance required by law to be charged to loans up to 1897. The total charges for maintenance to 1897, general expenses and sinking fund are given separately at the end of the tables. The amounts expended from these loans for the fiscal year ending Nov. 30, 1921, are stated in tables on pages 111 and 112. The total amounts charged to those loans are as follows:—

METROPOLITAN PARKS LOAN FUND.

Land	\$5,395,148 66
Miscellaneous, including construction of roads, buildings, etc.	3,395,496 79

(4) WATER ASSESSMENT, 1921.

The following water assessment was made by the Treasurer of the Commonwealth upon the various municipalities: —

Sinking fund requirements	\$234,665 68
Serial bonds	44,000 00
Interest	1,488,635 95
Maintenance:	
Appropriated by Legislature	\$867,960 00
Less balance on hand	5,535 03
	862,424 97
Total water assessment for 1921	\$2,969,726 60

In accordance with section 26, chapter 92 of the General Laws, the proportion to be paid by each city and town is based one-third in proportion to their respective valuations and the remaining two-thirds in proportion to their respective water consumption for the preceding year, except that but one-fifth of the total valuation and no consumption has been taken for the city of Newton, as it has not been supplied with water from the metropolitan works.

The division of the assessment for 1921 was as follows: —

CITIES AND TOWNS.	Assessment.	CITIES AND TOWNS.	Assessment.
Arlington	\$24,635 28	Nahant	\$4,399 54
Belmont	14,744 88	Newton	7,231 75
Boston	1,958,528 33	Quincy	85,289 92
Chelsea	62,997 73	Revere	39,177 67
Everett	64,699 16	Somerville	133,989 84
Lexington	10,014 00	Stoneham	13,974 36
Malden	57,120 28	Swampscott	15,470 68
Medford	40,358 42	Watertown	38,430 83
Melrose	24,093 56	Winthrop	19,712 42
Milton	14,857 95		\$2,629,726 60

(5) SUPPLYING WATER TO CITIES AND TOWNS OUTSIDE OF DISTRICT
AND TO WATER COMPANIES.

Sums have been received during the year 1921 under the provisions of the metropolitan water act, for water furnished, as follows:—

Town of Framingham	\$4,897 34
United States government (for Peddock's Island)	1,336 10
Westborough State Hospital	2,345 19
	\$8,578 63

The sums so received prior to March 23, 1907, were annually distributed among the cities and towns of the district, but since that date, in accordance with the provisions of chapter 238 of the Acts of 1907, the sums so received have been paid into the sinking fund.

(6) EXPENDITURES FOR THE DIFFERENT WORKS.

The following is a summary of the expenditures made in the various operations for the different works:—

CONSTRUCTION AND ACQUISITION OF WORKS.	For the Year ending December 31, 1921.
Administration applicable to all parts of the construction and acquisition of the works	\$2,914 00
Distribution system:	
Northern high service:	
Section 48 (reinforcement of the northern high-service pipe lines) . .	\$179 86
Section 49 (reinforcement of the northern high-service pipe lines) . .	318 59
Section 50 (reinforcement of the northern high-service pipe lines) . .	1,429 22
Additional pumping machinery at Spot Pond pumping station . .	252 31
Southern high service:	
Additional pumping machinery at Chestnut Hill pumping station of the southern high service	100,150 98
Northern extra high service:	
Arlington Reservoir in Arlington, Mass.	10,485 24
Southern extra high service:	
Section 44 (additional water supply for the town of Milton and the Hyde Park district of the city of Boston)	6,042 23
Weston Aqueduct supply mains, Section 9	784 41
Meters and connections	3,977 18
Acquisition, existing water works (Spot Pond case)	123,620 02
Amount carried forward	\$149,182 00

CONSTRUCTION AND ACQUISITION OF WORKS.		For the Year ending December 31, 1921.
<i>Amount brought forward</i>		\$149,182 00
Stock—pipes, valves, castings, etc., purchased and sent first to storage yards, and later transferred, as needed, to the various parts of the work:—		
Amount received	\$8,214 12	
Transferred from storage yards to the various sections of the work and in- cluded in costs of special works	666 73	
		7,547 39
		\$156,729 39
Amount charged from beginning of work to January 1, 1921		43,287,875 89
Total for construction and acquisition of works to January 1, 1922		\$43,444,605 28

MAINTENANCE AND OPERATION.		For the Year ending December 31, 1921.
Administration		\$13,733 30
General supervision		40,955 74
Taxes and other expenses		49,103 93
Wachusett Department:		
Superintendence	\$12,227 30	
Reservoir	24,487 39	
Forestry	13,636 37	
Protection of supply	15,043 63	
Buildings and grounds	8,557 94	
Wachusett Dam	8,826 23	
Wachusett Aqueduct	9,845 11	
Clinton sewerage system:		
Pumping station	3,552 36	
Sewers, screens and filter beds	9,335 75	
Sanitary inspection	1,466 34	
Swamp drainage	11,326 26	
Power plant	19,190 27	
Wachusett-Sudbury power transmission line	93 99	
Payments under industrial accident law and special benefit appropriations	43 50	
		137,632 44
Sudbury Department:		
Superintendence, Framingham office	\$14,060 05	
Ashland Reservoir	3,257 91	
Hopkinton Reservoir	3,492 00	
Whitehall Reservoir	3,797 45	
Framingham Reservoirs Nos. 1, 2 and 3	14,559 81	
Sudbury Reservoir	12,408 05	
Lake Cochituate	11,316 02	
Marlborough Brook filters	4,175 29	
Pegan filters	7,384 92	
Sudbury and Cochituate watersheds	2,156 49	
Sanitary inspection	3,350 96	
<i>Amounts carried forward</i>	\$79,958 95	\$241,425 41

MAINTENANCE AND OPERATION.		For the Year ending December 31, 1921.	
<i>Amounts brought forward</i>		\$79,958 95	\$241,425 41
Sudbury Department— <i>Con.</i>			
Cochituate Aqueduct		3,873 60	
Sudbury Aqueduct		9,220 74

Bellevue Reservoir		104 00	
Payments under industrial accident law and special benefit appropriations		1,523 17	
			408,394 92
Total for maintaining and operating works			\$777,703 57

(7) DETAILED FINANCIAL STATEMENT UNDER METROPOLITAN WATER ACT.

The Commissioner herewith presents, in accordance with the requirements of the metropolitan water act, a detailed statement of the expenditures and disbursements, receipts, assets and liabilities for the year 1921.

(a) *Expenditures and Disbursements.*

The total amount of the expenditures and disbursements on account of construction and acquisition of works for the year beginning January 1, 1921, and ending December 31, 1921, was \$156,729.39, and the total amount from the time of the organization of the Metropolitan Water Board, July 19, 1895, to December 31, 1921, has been \$43,444,605.28.

For maintenance and operation the expenditures for the year were \$777,703.57.

The salaries of the commissioners, and the other expenses of administration, have been apportioned to the construction of the works and to the maintenance and operation of the same, and appear under each of those headings.

The following is a division of the expenditures according to their general character:—

GENERAL CHARACTER OF EXPENDITURES.	For the Year ending December 31, 1921.	
CONSTRUCTION OF WORKS AND ACQUISITION BY PURCHASE OR TAKING.		
<i>Administration.</i>		
Commissioners	\$600 00	
Secretary	277 00	
Clerks and stenographers	1,429 50	
Stationery and printing	84 05	
Postage, express and telegrams	10 00	
Alterations and repairs of building	3 15	
Telephone, lighting, heating, water and care of building	303 97	
Rent and taxes, main office	200 43	
Miscellaneous expenses	5 90	
		\$2,914 00
<i>Engineering.</i>		
Chief engineer	\$1,233 89	
Principal assistant engineers	2,836 20	
Engineering assistants	4,960 92	
Inspectors	1,903 33	
<i>Amounts carried forward</i>	\$10,934 34	\$2,914 00

GENERAL CHARACTER OF EXPENDITURES.		For the Year ending December 31, 1921.	
<i>Amounts brought forward</i>		\$10,934 34	\$2,914 00
<i>Engineering — Con.</i>			
Railroad and street car travel		12 86	
Stationery and printing		52 09	
Engineering and draughting supplies		4 32	
Books, maps and photographic supplies		4 05	
Alterations and repairs of building, main office		9 45	
Telephone, lighting, heating, water and care of buildings, main office		911 98	
Rent and taxes, main office		601 30	
Miscellaneous expenses		19 15	
			12,549 54
<i>Construction.</i>			
Preliminary work:			
Advertising			85 60
Contracts, distribution system:			
Hodge Boiler Works, Contract 5, for furnishing and delivering street chambers for Venturi meter register		\$2,628 00	
Ames Iron Works, Contract 4, for furnishing 35 kilowatt electric lighting unit for Chestnut Hill Low Service Pumping Station No. 2		3,649 00	
Frazer Pritchard, Contract 10, for removing and disposing of used machinery and erecting boilers at Chestnut Hill Pumping Station No. 1		2,700 00	
James Driscoll & Son Co., Contract 8, for resurfacing Washington Street near Brookline Avenue, in Brookline		3,470 45	
Worthington Pump & Machinery Corp., Contract 3, for building and erecting pumping engine at Chestnut Hill Pumping Station No. 1		37,950 00	
D. M. Dillon Steam Boiler Works, Contract 5, for furnishing two vertical fire-tube boilers for Chestnut Hill Pumping Station No. 1		18,800 50	
Norfolk Iron Co., Contract 16, for galleries for two boilers at Chestnut Hill Pumping Station No. 1		1,094 80	
Underwood Machinery Co., Contract 9, for coal conveying equipment at Chestnut Hill Pumping Station No. 1		3,942 50	
Harvey L. Maney, Contract 15, for constructing reservoir foundation on Arlington Heights		7,538 65	
George T. Rendle, Contract 11, for laying 12-inch water pipes under the Neponset River, and New York, New Haven & Hartford Railroad, Boston		4,889 89	
Atlantic Works, Contract 14, for 30-inch hydraulic lift valves		2,003 45	
Warren Foundry & Machinery Co., Contract 12, for cast-iron water pipes and special castings		901 00	
Lumsden & Van Stone Co., Contract 13, for flanged special castings		2,060 74	
			91,628 98
Additional work:			
Labor		\$16,711 53	
Traveling		2 70	
Freight and express		238 09	
Tools, machinery, appliances and hardware supplies		2,424 12	
Electrical supplies		441 65	
Castings, ironwork and metals		3,184 43	
Iron pipe and valves		1,458 42	
<i>Amounts carried forward</i>		\$24,460 94	\$107,178 12

GENERAL CHARACTER OF EXPENDITURES.		For the Year ending December 31, 1921.	
<i>Amounts brought forward</i>		\$24,460 94	\$107,178 12
<i>Construction — Con.</i>			
Additional work — <i>Con.</i>			
Paint and coating		23 50	
Lumber and field buildings		637 12	
Brick, cement and stone		1,975 70	
Sand, gravel and filling		221 45	
Unclassified supplies		535 37	
Miscellaneous expenses		63 40	
			27,917 48
<i>Purchase of Existing Water Works.</i>			
Legal and expert:			
Legal services		\$595 70	
Expert services		3,200 00	
Court expenses		16,263 00	
Miscellaneous expenses		1,575 09	
			21,633 79
			\$156,729 39
Amount charged from beginning of work to January 1, 1921			43,287,875 89

Traveling expenses		3,815 92	
Telephones		1,472 98	
Teaming		1,981 27	
Tools and appliances		6,095 81	
Vehicles, harnesses and fittings		260 69	
Miscellaneous expenses		7,239 63	
<i>Amounts carried forward</i>		\$434,164 01	\$280,319 98

GENERAL CHARACTER OF EXPENDITURES.	For the Year ending December 31, 1921.	
<i>Amounts brought forward</i>	\$434,164 01	\$280,319 98
Contracts:		
F. E. Johnson, for work on Fountain Street, Framingham, Mass., at Reservoir No. 2 (authorized by vote of Commission September 1, 1921)	250 00	
Central Building Co., Contract 7-M, for granite facing for circular dam at Quinapoxet River in West Boylston, Mass.	6,812 75	
Whittredge Portable Steel Buildings Co., for furnishing steel garage for Sudbury Reservoir at Fayville, Mass. (authorized by vote of Commission October 27, 1921)	325 00	
Lombard Governor Co., Contract 6-M, for furnishing governors for Wachusett Power Plant at Clinton, Mass.	4,716 00	
Improvement and protection of water supplies	166 23	
Water from city of Worcester	253 00	
Payments under industrial accident law and special benefit appropriations	1,592 67	
		448,279 66
Payments in lieu of taxes		49,103 93
Total expenditures for maintenance and operation		\$777,703 57

(b) Receipts.

The total amount of receipts from the operations of the Commission and from sales of property for the year beginning January 1, 1921, and ending December 31, 1921, was \$127,032.98 and the total amount from the time of the organization of the Metropolitan Water Board, July 19, 1895, to December 31, 1921, has been \$1,845,406.06. The general character of these receipts is as follows: —

GENERAL CHARACTER OF RECEIPTS.	For the Year ending December 31, 1921.	
Applicable to the loan fund:		
Land and buildings	\$3,504 34	
Construction tools, supplies and reimbursements	5,727 88	
		\$9,232 22
Applicable to payment of interest, sinking fund requirements and expenses of maintenance and operation:		
Proceeds from operations of the Board:		
Rents	\$3,457 10	
Land products	8,025 12	
Electric energy	93,367 95	
Maintenance labor, tools, supplies and reimbursements	4,250 68	
Interest and unclassified receipts	121 28	
		109,222 13
<i>Amount carried forward</i>		\$118,454 35

GENERAL CHARACTER OF RECEIPTS.	For the Year ending December 31, 1921.
<i>Amount brought forward</i>	\$118,454 35
Applicable to the sinking fund:	
Water supplied to cities and towns, water companies and others . .	8,578 63
	\$127,032 98
Amount credited from beginning of work to January 1, 1921	1,718,373 08
Total receipts to January 1, 1922	\$1,845,406 06

The foregoing receipts have been credited to the various objects or works, as follows: —

SOURCES OF RECEIPTS.	For the Year ending December 31, 1921.
Supplying water outside of water district	\$8,578 63
Construction and acquisition of works:	
Administration	\$117 51
Sudbury Reservoir	240 00
Distribution system	5,723 03
Purchase of existing water works	3,264 34
	9,344 88
Maintenance and operation of works:	
Administration	\$168 48
General supervision	444 01
Wachusett Aqueduct	324 49
Wachusett Reservoir	4,963 49
Wachusett electric power plant	54,302 74
Sudbury system	5,565 44
Sudbury electric power plant	39,065 21
Distribution system	3,020 28
Clinton sewerage system	1,255 33
	109,109 47
	\$127,032 98
Amount credited from beginning of work to January 1, 1921	1,718,373 08
Total receipts to January 1, 1922	\$1,845,406 06

(c) *Assets.*

The following is an abstract of the assets of the water works, a complete schedule of which is kept on file in the office of the Commission: —

Office furniture, fixtures and supplies; engineering and scientific instruments and supplies; police supplies; horses, vehicles, field machinery, etc.; machinery, tools and other appliances and supplies; completed works, real estate and buildings connected therewith.

(d) *Liabilities.*

There are sundry bills for current expenses which have not yet been received.

Amount on Monthly Estimates, not due until Completion of Contract or until Claims are settled.

NAME.	Work.	Amount.
Jos. Hanreddy	Contract 314, Section 7 of the Weston Aqueduct supply mains in Newton.	\$10 00
Worthington Pump & Machinery Co. . .	Contract 3, for building and erecting pumping engine at Chestnut Hill Pumping Station No. 1.	37,950 00
D. M. Dillon Steam Boiler Works . .	Contract 5, for furnishing two vertical fire-tube boilers for Chestnut Hill Pumping Station No. 1.	989 50
Norfolk Iron Co.	Contract 16, for galleries for two boilers at Chestnut Hill Pumping Station No. 1.	193 20
Underwood Machinery Co.	Contract 9, for coal-conveying equipment at Chestnut Hill Pumping Station No. 1.	142 50
Harvey L. Maney	Contract 15, for constructing reservoir foundation on Arlington Heights.	1,330 35
Geo. T. Rendle	Contract 11, for laying 12-inch water pipes under the Neponset River and New York, New Haven & Hartford Railroad, Boston.	862 92
Atlantic Works	Contract 14, for 30-inch hydraulic lift valves	353 55
Warren Foundry & Machinery Co. . .	Contract 12, for cast-iron water pipes and special castings.	159 00
Lumsden & Van Stone Co.	Contract 13, for flanged special castings	363 66
Central Building Co.	Contract 7-M, for granite facing for circular dam at Quinapoxet River in West Boylston, Mass.	1,202 25

Settlements are pending with the following parties for land and easements taken in lands owned by them: —

New York, New Haven & Hartford Railroad Company, Frederique Ropp, heirs of Ella Wood, Jack Calcia, Brayton D. Fisher, heirs of Andrew Temple.

SEWERAGE WORKS.

(1) METROPOLITAN SEWERAGE LOANS, RECEIPTS AND PAYMENTS.

The loans authorized for the construction of the Metropolitan Sewerage Works, the receipts which are added to the proceeds of these loans, the expenditures for construction, and the balances available on January 1, 1922, have been as follows: —

North Metropolitan System.

Loans authorized under various acts to January 1, 1922, for the construction of the North Metropolitan System and the various extensions \$7,512,365 73

Receipts from sales of real estate and from miscellaneous sources
which are placed to the credit of the North Metropolitan
System:

For the year ending December 31, 1921	. . .	\$73 95	
For the period prior to January 1, 1921	. . .	87,348 21	
			\$87,422 16
			\$7,599,787 89

Amount approved for payment from the Metropolitan Sewerage

Loan Fund, North System:

For the year ending December 31, 1921	. . .	\$25,922 53	
For the period prior to January 1, 1921	. . .	7,546,657 58	
			7,572,580 11

Balance, North Metropolitan System, January 1, 1922	. . .	\$27,207 78
---	-------	-------------

South Metropolitan System.

Loans authorized under the various acts to January 1, 1922,
applied to the construction of the Charles River Valley
sewer, Neponset valley sewer, high-level sewer and exten-
sions, constituting the South Metropolitan System . . . \$9,912,046 27

Receipts from pumping, sales of real estate and from miscel-
laneous sources, which are placed to the credit of the South
Metropolitan System:

For the year ending December 31, 1921	. . .	\$4,756 35	
For the period prior to January 1, 1921	. . .	19,881 05	
			24,637 40
			\$9,936,683 67

Amount approved for payment from the Metropolitan Sewerage

Loan Fund, South System:

On account of the Charles River valley sewer	. . .	\$800,046 27
On account of the Neponset valley sewer	. . .	911,531 46
On account of the high-level sewer and exten- sions, including Wellesley extension:		

For the year ending December

31, 1921		\$98,425 49
----------	-----------	-------------

For the period prior to January

1, 1921		8,094,864 72
---------	-----------	--------------

		8,193,290 21
--	-------	--------------

		9,904,867 94
--	-------	--------------

Balance, South Metropolitan System, January 1, 1922	. . .	\$31,815 73
---	-------	-------------

(2) TOTAL SEWERAGE DEBT, DECEMBER 31, 1921.

North Metropolitan System.

Bonds issued by the Treasurer of the Commonwealth:

Sinking fund bonds (3 and 3½ per cent)	\$6,563,000 00
Serial bonds (3½ and 4 per cent)	925,500 00

Total bond issue to December 31, 1921	\$7,488,500 00
Serial bonds paid prior to January 1, 1921	\$154,500 00
Serial bonds paid in 1921	26,500 00
	181,000 00

Total bond issue outstanding December 31, 1921 . . . \$7,307,500 00

Gross sewerage debt	\$7,307,500 00
Sinking fund December 31, 1921	3,534,016 07

Net sewerage debt December 31, 1921 . . . \$3,773,483 93
 A net decrease for the year of \$339,374.72.

South Metropolitan System.

Bonds issued by the Treasurer of the Commonwealth:

Sinking fund bonds (3 and 3½ per cent)	\$8,877,912 00
Serial bonds (4, 4½ and 5 per cent)	945,000 00

Total bond issue to December 31, 1921	\$9,822,912 00
Serial bonds paid prior to January 1, 1921	\$90,000 00
Serial bonds paid in 1921	27,000 00
	117,000 00

Total bond issue outstanding December 31, 1921 . . . \$9,705,912 00

Gross sewerage debt	\$9,705,912 00
Sinking fund December 31, 1921	2,164,212 31

Net sewerage debt December 31, 1921 . . . \$7,541,699 69
 A net decrease for the year of \$243,829.63.

¹ The sum of \$10,912 was appropriated to reimburse the town of Watertown for the expense of constructing the Watertown siphon.

² This amount includes \$13,000, balance of appropriation for north metropolitan maintenance under chapter 775, Acts of 1914, which was transferred to North Metropolitan Loan Fund, under authority of chapter 76, Resolves of 1915. No bonds to be issued, as this was cash.

³ Of this amount, \$789,134.27 was expended for the construction of the Charles River valley sewer, which is now included in the South Metropolitan System.

(4)

SEWER ASSESSMENTS, 1921.

The following sewer assessments were made by the Treasurer of the Commonwealth upon the various municipalities:

North Metropolitan Sewerage System.

Sinking fund requirements	\$145,759 10
Serial bonds	24,000 00
Interest	235,878 94

Maintenance:

Appropriated by Legislature	\$385,564 77	
Less balance on hand	520 67	
		\$384,844 10

Total North Metropolitan sewerage assessment \$790,482 14

South Metropolitan Sewerage System.

Sinking fund requirements	\$120,029 44
Serial bonds	27,000 00
Interest	342,257 48

Maintenance:

Appropriated by Legislature	\$204,261 32	
Less balance on hand	354 66	
		203,906 66

Total South Metropolitan sewerage assessment \$693,193 58

In accordance with the provisions of sections 5 and 6, chapter 92 of the General Laws, the proportion to be paid by each city and town to meet the interest and sinking fund requirements for each year is based upon their respective taxable valuations, and to meet the cost of maintenance and operation upon their respective populations.

The divisions of the assessments for 1921 were as follows:—

North Metropolitan Sewerage System.

CITIES AND TOWNS.	Assessment.	CITIES AND TOWNS.	Assessment.
Arlington	\$24,406 13	Reading ¹	\$9,934 06
Belmont	15,016 03	Revere	33,234 61
Boston	117,228 57	Somerville	111,731 59
Cambridge	159,936 17	Stoneham	9,027 11
Chelsea	51,050 62	Wakefield	16,642 76
Everett	50,868 58	Winchester	17,620 42
Lexington	6,652 52	Winthrop	19,887 90
Malden	57,181 03	Woburn	20,661 75
Medford	45,955 13		
Melrose	23,447 16	Total	\$790,482 14

¹ Reading is also assessed \$7,000 for sinking fund requirements in accordance with section 5, chapter 159, General Acts of 1916.

South Metropolitan Sewerage System.

CITIES AND TOWNS.	Assessment.	CITIES AND TOWNS.	Assessment.
Boston	\$346,859 96	Waltham	\$38,019 99
Brookline	89,815 63	Watertown	30,704 43
Dedham	14,760 98	Wellesley	14,687 23
Milton	19,331 64		
Newton	80,103 93	Total	\$693,193 58
Quincy	58,909 79		

(5) EXPENDITURES FOR THE DIFFERENT WORKS.

The following is a summary of the expenditures made in the various operations for the different works:—

CONSTRUCTION AND ACQUISITION OF WORKS.		For the Year ending December 31, 1921.
NORTH METROPOLITAN SYSTEM.		
North System, enlargement:		
Administration		\$123 89
Reading extension:		
Section 75	\$15,943 74	
Section 76	7,870 96	
Real estate:		
Legal, conveyancing and expert	350 00	
		24,164 70
Malden River siphon, Section 19		1,633 94
		\$25,922 53
Amount charged from beginning of work to January 1, 1921		7,546,657 58
Total for North Metropolitan System to January 1, 1922		\$7,572,580 11
SOUTH METROPOLITAN SYSTEM.		
High-level sewer extensions:		
Administration		\$108 38
Wellesley extension:		
Section 99	\$22,320 36	
Section 100	33,124 69	
Section 101	42,497 06	
Real estate:		
Legal, conveyancing and expert	375 00	
		98,317 11
		\$98,425 49
Amount charged from beginning of work to January 1, 1921		9,806,442 45
Total for South Metropolitan System to January 1, 1922		\$9,904,867 94
Total for construction, both systems		\$17,477,448 05

MAINTENANCE AND OPERATION.		For the Year ending December 31, 1921.
North Metropolitan System		
		\$333,983 21
South Metropolitan System		
		176,938 45
Total for maintenance, both systems		\$510,921 66

(6) DETAILED FINANCIAL STATEMENT.

The Commissioner herewith presents, in accordance with the metropolitan sewerage acts, an abstract of the expenditures and disbursements, receipts, assets and liabilities for the year ending December 31, 1921:—

(a) *Expenditures and Disbursements.*

GENERAL CHARACTER OF EXPENDITURES.	For the Year ending December 31, 1921.
CONSTRUCTION OF WORKS AND ACQUISITION BY PURCHASE OR TAKING.	
<i>North System Enlargement.</i>	
Administration:	
Stationery, printing and office supplies	\$13 75
Telephone, lighting, heating, water and care of building	46 07
Repairs of building	1 57
Rent and taxes, main office	62 50
	\$123 89
Engineering:	
Engineering assistants	\$740 00
Traveling expenses	51 30
Stationery, printing and office supplies	8 99
Telephone, lighting, heating, water and care of building	138 21
Repairs of building	4 73
Rent and taxes	187 50
Miscellaneous expenses	29 62
	1,160 35
Construction:	
Labor and teaming	\$1,303 85
Brick, cement, lumber and other field supplies and expenses	1,037 18
	2,341 03
Contracts:	
Bruno & Petitti, Contract 1 (in part), for constructing part of Section 76 of the Reading extension of the North Metropolitan System in Wakefield and Reading	\$7,745 86
Antony Cefalo, Contract 4 (in part), for constructing Section 75 of the Reading extension of the North Metropolitan System in Stoneham and Wakefield	14,201 40
	21,947 26
Real estate:	
Legal, conveyancing and expert	350 00
Total for North Metropolitan System	\$25,922 53
SOUTH METROPOLITAN SYSTEM.	
<i>High-level Sewer Extensions.</i>	
Administration:	
Stationery, printing and office supplies	\$8 96
Telephone, lighting, heating, water and care of building	45 61
<i>Amount carried forward</i>	\$54 57

GENERAL CHARACTER OF EXPENDITURES.		For the Year ending December 31, 1921.
<i>Amount brought forward</i>		\$54 57
<i>High-level Sewer Extension — Con.</i>		
Administration — <i>Con.</i>		
Repairs of building		1 31
Rent and taxes, main office		52 50
		\$108 38
Engineering:		
Engineering assistants		\$2,615 00
Inspectors		2,165 63
Traveling expenses		96 55
Stationery, printing and office supplies		1 90
Engineering and drafting supplies		60
Telephone, lighting, heating, water and care of building		136 84
Repairs of building		3 94
Rent and taxes, main office		157 50
Miscellaneous expenses		281 74
		5,459 70
Construction:		
Brick, cement, lumber and other field supplies and expenses		564 76
Contracts:		
Rendle-Stoddard Co., Contract 3, for constructing Section 99 (in part) of the Wellesley extension of the high-level sewer in Dedham		\$21,709 84
Bruno & Petitti, Contract 2, for constructing Section 100 of the Wellesley extension of the high-level sewer in Dedham		31,614 03
Rendle-Stoddard Co., Contract 145, for constructing Section 101 of the Wellesley extension of the high-level sewer in Needham and Dedham		38,593 78
		91,917 65
Real estate:		
Legal, conveyancing and expert		375 00
Total for South Metropolitan System		\$98,425 49
MAINTENANCE AND OPERATION OF WORKS.		
<i>North Metropolitan System.</i>		
Administration:		
Commissioners		\$672 67
Secretary and assistants		1,959 00
Rent		225 44
Heating, lighting and care of building		319 39
Repairs of building		3 98
Postage		54 00
Printing, stationery and office supplies		510 53
Telephones		38 80
Traveling expenses		10 00
Miscellaneous expenses		37 60
		\$3,831 46
<i>Amount carried forward</i>		\$3,831 46

GENERAL CHARACTER OF EXPENDITURES.		For the Year ending December 31, 1921.

Automobiles	1,505 53
Brick, cement and lime	89 35
Castings, ironwork and metals	202 55
Fuel and lighting	62 75
Freight, express and teaming	50
Jobbing and repairing	426 39
Lumber	289 19
Machinery, tools and appliances	275 43
Paints and oils	319 66
Rubber and oiled goods	69 43
Sand, gravel and stone	486 94
Telephones	233 89
Traveling expenses	1,102 34
General supplies	1,015 27
Miscellaneous expenses	239 47
	44,825 34
City of Boston for pumping	5,869 36
Horses, vehicles and stable account	2,640 74
Payments under industrial accident law and special benefit appropriations .	568 00
Total for South Metropolitan System	\$176,938 45

(b) Receipts.

The receipts from the sales of property, from rents and from other sources, have been credited as follows: —

ACCOUNT.	For the Year ending December 31, 1921.
Construction:	
North Metropolitan System	\$73 95
South Metropolitan System	4,756 35
Maintenance:	
North Metropolitan System	527 01
South Metropolitan System	611 69
Sinking fund:	
North Metropolitan System	75 00
Interest fund:	
North Metropolitan System	29 20
South Metropolitan System	38 46
	\$6,111 66
Amount credited from beginning of work to January 1, 1921	156,185 11
Total receipts to January 1, 1922	\$162,297 77

(c) *Assets.*

The following is an abstract of the assets of the sewerage works, a complete schedule of which is kept on file in the office of the Commission: —

Office furniture, fixtures and supplies; engineering and scientific instruments and supplies; horses, vehicles, field machinery, etc.; machinery, tools and other appliances and supplies; completed works, real estate connected therewith.

(d) *Liabilities.*

There are sundry bills for current expenses which have not yet been received.

Amounts on Monthly Estimates, not due until Completion of Contracts or until Claims are settled.

NAME.	Work.	Amount.
High-level sewer extensions:		
Timothy O'Connell	Contract 57, Section 82 (in part)	\$60 00
Rendle-Stoddard Co. . . .	Contract 3 (new series), Section 99 (in part), Wellesley extension.	1,200 00
Bruno & Petitti	Contract 2 (new series), Section 100, Wellesley extension.	199 72
Rendle-Stoddard Co. . . .	Contract 145, Section 101, Wellesley extension .	2,000 00

Settlements are pending with the following parties for easements taken in lands owned by them: —

Clifford M. Locke, Martha W. Burrage, Edward and Catherine Bingham, Hannah Bingham, Katherine H. Rooney, Mary A. Read, Hannah E. Pond, Richard G. Wadsworth, Frank D. Chase, heirs of Stephen M. Weld, Bear Hill Associates, Herbert M. Hopkins, George A. Forbes, Lawrence Minot and Moses Williams, Trustees, Frederick P. Royce and Francis Peabody, Trustees, Maurice McKenna, Michael Flynn, Cornelius J. Sweeney, Mary A. Scalley, Stoneham Branch Railroad, Elizabeth L. McGrady, Margaret McLaughlin, Annie E. Greene, Richard C. Christie, Carl and Emelia Christiansen, Ida A. Nilsson, Bridget Mary McCarty, Walter Steele, Betty K. Farr, Emma C. and Ruth G. Prescott.

[The details of contracts made before

1. Number of Contract.	2. WORK.	3. Num- ber of Bids.	AMOUNT OF BID.		6. Contractor.
			4. Next to Lowest.	5. Lowest.	
1	1 ¹ Furnishing 2 vertical fire tube boilers for Chestnut Hill Pumping Station No. 1.	2	\$21,800 00	\$19,790 00 ²	D. M. Dillon Steam Boiler Works, Fitch- burg, Mass.
2	3 Building and erecting pump- ing engine for Chestnut Hill Pumping Station No. 1.	2	86,600 00	75,900 00 ²	Worthington Pump & Machinery Corpora- tion, New York.
3	4 ¹ Furnishing 35 kilowatt electric lighting unit for Chestnut Hill Pumping Station No. 2.	3	3,960 00	3,649 00 ²	Ames Iron Works, Os- wego, N. Y.
4	5 ¹ Six street chambers for Ven- turi meter registers.	3	3,000 00	2,628 00 ²	Hodge Boiler Works, East Boston.
5	7 ¹ Purchase and removal of three used 150 h. p. horizontal re- turn tubular boilers at Chest- nut Hill pumping station.	2	301 00 ³	500 00 ^{2,4}	Thomas Rush, Boston.
6	8 ¹ Resurfacing Washington Street near Brookline Avenue, Brookline.	3	3,637 50	3,605 00 ²	James Driscoll & Son Co., Brookline, Mass.
7	9 ¹ Coal-conveying equipment for Chestnut Hill Pumping Station No. 1.	4	5,700 00	4,085 00 ²	Underwood Machinery Co., South Boston.
8	10 ¹ Removing and disposing of used machinery and unload- ing and erecting boilers at Chestnut Hill Pumping Station No. 1.	3	3,000 00	2,700 00 ³	Frazer Pritchard, Watertown, Mass.
9	11 ¹ Laying 12-inch water pipes under Neponset River, Bos- ton.	6	6,000 00	5,443 00 ²	George T. Rendle Co., Boston.
10	12 ¹ 14 tons 30-inch cast-iron water pipe; 5 tons special castings.	2	1,259 70	1,060 00 ²	Warren Foundry & Machine Co., Phil- lipsburg, N. J.
11	13 ¹ 17 tons flanged special cast- ings.	5	2,686 00	2,295 00 ²	Lumsden & Van Stone Co., Boston.

¹ Contract completed.² Contract based upon this bid.

APPENDIX No. 1.

THE YEAR 1921 — WATER DIVISION.

1921 have been given in previous reports.]

7. Date of Con- tract.	8. Date of Completion of Contract.	9. Prices of Principal Items of Contract.	10. Value of Work done Dec. 31, 1921.	
May 27, 1920	June 3, 1921	See previous report	\$19,790 00	1
Oct. 29, 1920	-	See previous report	50,000 00	2
Aug. 25, 1920	Feb. 18, 1921	See previous report	3,649 00	3
Nov. 12, 1920	Feb. 24, 1921	See previous report	2,628 00	4
Dec. 22, 1920	Feb. 24, 1921	See previous report	500 00	5
April 20, 1921	June 23, 1921	For all excavation, \$2 per cu. yd.; for constructing concrete base, \$12.50 per cu. yd.; for brick paving on sand cushion, \$4.05 per sq. yd.	3,470 45	6
May 25, 1921	Aug. 12, 1921	For whole work, \$4,085	4,085 00	7
May 3, 1921	June 23, 1921	For whole work, \$2,700	2,700 00	8
Sept. 17, 1921	Dec. 1, 1921	For laying 12-inch cast-iron pipe with flexible joints, \$14 per lin. ft.; for laying 12-inch cast-iron pipe with ordinary joints, \$11.50 per lin. ft.; for laying 4-inch cast-iron pipe for blow-offs, \$9 per lin. ft.; for valve chambers, \$216 per chamber; for concrete masonry, \$30 per cu. yd.	5,752 81	9
Sept. 21, 1921	Dec. 31, 1921	For 30-inch cast-iron pipe, \$40 per ton of 2,000 pounds; for special castings, \$100 per ton of 2,000 pounds, f. o. b. cars at foundry.	1,209 80	10
Sept. 21, 1921	Dec. 9, 1921	For flanged special castings, \$135 per ton of 2,000 pounds, f. o. b. foundry.	2,424 40	11

³ Next to highest bid.⁴ Highest bid.

¹ The area of the Sudbury watershed used in these records included water surfaces amounting to 1.9 per cent of the whole area from 1875 to 1878, inclusive, and was subsequently increased by the construction of storage reservoirs, to 3.0 per cent in 1879, 3.4 per cent in 1885, 3.9 per cent in 1894, and 6.5 per cent in 1898. The watershed also contains extensive areas of swampy land, which, though covered with water at times, are not included in the above percentages of water surfaces.

NOTE. — Since 1897 the reservoirs on the Sudbury watershed have been full of water nearly all the time, while large quantities of water have been received from the Wachusett Reservoir and the recorded yield has been affected by these conditions, especially during dry weather.

TABLE No. 9. — *Wachusett System. — Statistics of Flow of Water, Storage and Rainfall in 1921.*

[Watershed above dam = 108.84 square miles.]

[Watershed above dam = 108.34 square miles.]

Per capita	105.0	93.0	92.6	85.7	88.0	90.1	105.5	97.9	101.0	93.0

This table includes the water consumed in the cities and towns enumerated in Table No. 16, together with the water consumed in Newton, which is included in the Metropolitan Water District but has not been supplied from the Metropolitan Works, and a small section of the town of Saugus.

From 1893 to 1903, inclusive, consumption based on pumpage. Since 1903, portion of supply delivered by gravity and measured by meters.

APPENDIX No. 5.

FINANCIAL STATEMENT PRESENTED TO THE GENERAL COURT ON JANUARY 10, 1921.

The Metropolitan District Commissioner respectfully presents the following abstract of the account of the receipts, expenditures, disbursements, assets and liabilities of the Metropolitan Water and Sewerage Works for the year ending November 30, 1921, in accordance with the provisions of section 100 of chapter 92 of the General Laws.

METROPOLITAN WATER WORKS.

Construction.

The loans authorized for expenditures under the Metropolitan Water acts, the receipts which are added to the loan fund, the expenditures for the construction and acquisition of works, and the balance available on December 1, 1921, have been as follows:—
